Instructions for the Paper Setters:-

Eight questions of equal marks (Specified in the syllabus) are to be set, two in each of the four Sections (A-D). Questions may be subdivided into parts (not exceeding four). Candidates are required to attempt five questions, selecting at least one question from each Section. The fifth question may be attempted from any Section.

Course Objectives:

At the end of this course, the student should be able to understand the water quality requirement for human consumption, different treatment process for municipal water treatment, application of glass, ceramics, composites, magnetic materials, Role of refractories for synthesis of high performance materials. Polymer, rubber and silicone material uses in daily life. Introduction to electrochemistry. Application of CNT and graphene in electronics industry.

Total No. of Lectures –45

	Lecture wise breakup	**Number of lectures**
	SECTION - A	
1	**Water hardness:** Common impurities of water, Hardness: Introduction, EDTA method for determination of hardness, degree of hardness. Numerical based on hardness and EDTA method.	4
2	**Water hardness related problems:** Boiler troubles, their causes, disadvantages and prevention: Formation of solids (scale and sludge), carry over (priming and foaming), corrosion and caustic embrittlement.	2
3	**Water treatment techniques**: Introduction, water purification techniques, steps involved in purification of water, sedimentation, coagulation, filtration and sterilization, chlorination.	3
4	**Softening of water:** Lime-Soda method, Zeolite method, Deionization/Demin-eralization methods. Numerical problems based on Lime-Soda and Zeolite softening methods.	3

SECTION - B		
5	**Glasses, Ceramics, Composites** Glassy state, glass formers and modifiers, types of glasses, manufacturing, applications. Ceramic structures, types of ceramics and their properties. Composites; types, properties and applications.	6
6	**Magnetic Materials:** Introduction, types of magnetic material, hard and soft ferrites, magnetic properties and applications.	3
7	**Refractories:** Definition, classification, properties, requisites of good refractory, manufacturing of refractory, silica and fire clay refractory and their uses. Seger's (Pyrometric) Cone Test and RUL Test.	3
SECTION - C		
8	**Polymers:** Introduction, classification and constituents of polymers, polymer structure and properties, glass transition temperature (T_g), melting point (T_m), structure-property relations (general), synthesis, properties and application of commercial polymers (Bakelite, Polyethylene, Polypropylene, Polystyrene, Polycarbonate, Polytetrafluoroethylene, Polyester and Nylon)	6
9	**Polymer processing methods**: Introduction, compounding, moulding (Injection, Compression, Blow film and Extrusion). Application of polymers such as contact lenses, bulletproof vest, etc.	3
10	**Rubber:** Introduction, natural rubber, vulcanization, different types of rubber, synthesis of rubbers viz. Buna-S, Buna-N, Buty1 and neoprene rubbers, properties and application.	3
SECTION - D		
12	**Silicone based compounds:** Introduction, properties, preparation of silicones, cross-linked silicones, silicon fluids or oils, silicon elastomers and their applications.	2
13	**Electrochemistry:** Introduction, Strong, moderate and weak electrolytes, degree of ionization, factors affecting degree of ionization, Arrhenius theory of ionization, specific conductance, molar conductance, Faraday's Law of electrolysis, Chemical cells, distinguish between electrolytic and galvanic cell, reversible and irreversible cells with examples. Standard electrode (reduction) potential of half-cells. Applications of electrochemistry in daily life.	4
14	**Nanomaterial:** Introduction, properties, general methods of preparation. Applications of fullerenes, CNTs and graphene.	3

List of Practicals:

1. Determination of total hardness of Water.
2. Determination of temporary and permanent hardness of water.
3. To determine the strength of sodium carbonate in given sample of washing soda.
4. To determine the strength of sodium carbonate and sodium hydroxide in caustic soda solution.
5. To determine the strength of acetic acid in vinegar
6. Find the strength of KMnO4 solution with oxalic acid
7. Find the strength of KMnO4 solution with Mohr's salt.
8. To determine the number of water molecules in Mohr's salt by titration method.
9. Determination of relative viscosity of a given liquid with respect to water by viscometer.
10. Determination of surface tension of a given liquid by drop number method by stalagmometer.
11. To determine the strength of strong and weak acid conductometry
12. To determine the critical micelle concentration of a soap (sodium laurate) by surfacetension measurements.

Course Outcomes:	
1	Develop new methods to produce soft water for industrial use and potable water at low cost.
2	Replace metals with polymer in different application areas.
3	Develop low cost and new methods for synthesis of Nano materials.
4	Apply their knowledge for development of new application of electrochemistry.
5	Demonstrate the knowledge of polymer materials for advance engineering applications.

Course Objectives:

The aim of the course is to introduce the important topics of mathematics to future engineers which they would find useful in their respective engineering branches. This course would act as foundation for the students with basic as well as advanced concepts for familiarizing them with the use of mathematics to the real life and problems associated with their respective disciplines.

Total No. of Lectures –

	Lecture wise breakup	**Number of Lecture**
	SECTION - A	
1	**Matrices:** Introduction to matrices, Inverse and rank of a matrix, rank-nullity theorem; Symmetric, skew-symmetric and orthogonal matrices, Hermitian and skew-Hermitian matrices, Unitary matrix, Determinants; System of linear equations; Eigenvalues and eigenvectors; Diagonalization of matrices; Cayley-Hamilton Theorem.	10
	SECTION - B	
2	**Infinite Series:** Convergence and divergence of infinite series, Geometric series test, Positive term series, p-series test, [Comparison test, D' Alembert's ratio test, Cauchy's root test, Integral test, Raabe's test, Logarithmic test, Gauss's test] (without proofs), Alternating series and Leibnitz's rule, Power series, Radius and interval of convergence.	10

	SECTION - C	
3	**Differential Calculus:** Partial Derivatives, Euler's theorem on homogeneous functions, Maclaurin's and Taylor's expansions of single and two variables, Maxima and minima of functions of several variables, Lagrangian method of multipliers, Multiple integrals and their use in obtaining surface areas and volumes of solids.	12
	SECTION – D	
4	**Vector Calculus:** Scalar and Vector point functions, Differentiation of vectors, Gradient of a scalar field, Divergence and Curl of a vector field, Line integral of a vector field, Surface integral of vector field, Volume integral of a scalar field, Green's theorem, stokes theorem, Gauss divergence theorem (without proofs) and their applications.	12

Course Outcomes:	
1	Students will be able to calculate rank of matrix, characteristic equation & characteristic roots & use the applicability of Caylay Hamilton Theorem to find inverse of matrix which is very important in many engineering application.
2	It will equipped the students in determining whether the given function can be approximated with the power series.
3	Students will learn the various applications of mathematics using vector calculus techniques.

Course Objectives:
This course is aimed to introduce important initial understanding of electrical and electronics engineering to the 1st year students, this will act as the foundation for the advanced electronics courses. The aim of this course is to familiarize the students to the basics of electricity, electrical machines and the basics of electronic devices. so that they can use this knowledge in relevant applications.

Total No. of Lectures –48

Lecture wise breakup		**Number of Lectures**
SECTION – A		
1	**Electricity and power supply**: Features of the power supply system, power station, transmission, distribution lines, difference between AC and DC, voltage, current and resistance, concept of electromagnetic induction and production of alternating e.m.f - single phase and 3 phase, 3-phase star and delta connections, voltage and current relations. **Electrical Machinery:** Transformer, its working principle, types of transformers and their applications, performance losses, efficiency and voltage regulation, open circuit and short circuit tests on transformer, auto transformers.	12
SECTION – B		
2	**Circuit Analysis**: A brief review of DC and single phase AC circuits. , Star-delta load transformation, concept of balanced and unbalanced three phase circuits, measurement of power and power factor in three phase balanced circuits. **Semiconductors:** Introduction to semiconductors, Intrinsic Semiconductor, n-type and p-type semiconductors, Effect of Doping, Fermi levels, Charge flow in semiconductors.	12

SECTION – C		
3	**PN junction diode**: Theory of PN junction diode, depletion layer, barrier potential, Volt-Ampere Characteristics, Current Components, Storage Capacitance and transition capacitance, Junction diode switching times, Zener diode, LED, Photodiode, Varactor diode, Schottky diode **Bipolar Junction Transistors**: Junction Transistor, Current components, transistor as an amplifier, CB, CE and CC configurations and characteristics.	12
SECTION – D		
4	**Fundamentals of DC & AC Motors:** Working principle, construction, types & characteristics of DC motor, Working principle of Single-Phase & Three-Phase Induction motor, Three phase synchronous motor. **Control and Protection**: Control mechanism, principle and applications of protection devices: Fuses, MCB, LCB, relays. Need& types of earthing and grounding, Cables, Construction of LT & HT cables.	12

Course Outcomes: After study of this subject the student will become	
1	Familiar with the electricity production, distribution and the use of control/protection devices.
2	Able to understand the working and applications of electrical machines.
3	Able to understand the basics of semiconductor devices and their applications.
4	Familiar to the concept of rectification and filtration circuits.
5	Able to analyze the basic DC and AC circuits and to solve related circuit problems.

PRACTICAL:

1. Study of VI characteristics of PN junction
2. Study of Half wave, full wave & Bridge rectifiers.
3. Study of simple capacitive, T & II filters.
4. Study of zener as a voltage regulator.
5. Study of transistor characteristics in CC, CB and CE configuration
6. To study the performance characteristic of clipper circuit
7. To study the performance characteristic of clamper circuit

Course Objectives:
At the end of this course, the student should be able to understand the basics of computer as well as programming. The students are able to write programs. This course introduces computer programming using the Python programming language. Emphasis is placed on common algorithms and programming principles utilizing the standard library with Python.

Total No. of Lectures –

	Lecture wise breakup	**Number of Lectures**
	SECTION - A	
1	Block diagram of Computer, Associated peripherals, Memories – RAM, ROM, Secondary Storage Devices, Classification of Computers and Languages, Introduction to Compilers, Interpreter and Assemblers, Introduction of various operating system with their file system.	
	SECTION - B	
2	Algorithm and Flowchart, Introduction to Python and Setting up the Python development environment, Basic syntax, interactive shell, editing, saving, and running a script, Concept of data types, Random number, Real numbers, immutable variables, Python console Input / Output. Arithmetic operators and expressions, Conditions, Comparison operators, Logical Operators, Is and In operators, Control statements: if-else, Nested If-Else, Loops (for, while)	
	SECTION - C	
3	Built in function and modules in python, user defined functions, passing parameters, arguments and return values; formal vs actual arguments, Recursion, lists, Common List operations	

SECTION - D		
4	String Handling, Unicode strings, Strings Manipulation:-compare strings, concatenation of strings, Slicing strings in python, converting strings to numbers and vice versa. Strings and text files; manipulating files and directories, os and sys modules; text files: reading/writing text and numbers from/to a file; creating and reading a formatted file (csv or tab-separated).	

Course Outcomes:	
1	Implement a given algorithm as a computer program in python language with the understanding of hardware components and memory utilization.
2	Able to use standard programming constructs: repetition, selection, functions, composition, modules and different data types
3	Adapt and combine standard algorithms to solve a given problem (includes numerical as well as non-numerical algorithms) and to debug the program written in python language

Course Objectives:

At the end of this course, the student should be able to understand the

1. Understand applications of hand tools and power tools.
2. Understand the operations of machine tools.
3. Select the appropriate tools required for specific operation.
4. Comprehend the safety measures required to be taken while using the tools.

5	Sheet-metal Shop: (a) Study of tools & operations. (b) Making Funnel complete with soldering. (c) Fabrication of tool-box, tray, electric panel box etc.	6
6	Machine Shop: (a) Study of Single point cutting tool, machine tools and operations. (b) Plane turning. (c) Step turning. (d) Taper turning. (e) Threading.	6
SECTION - D		
7	Foundry Shop: (a) Study of tools & operations (b) Pattern making. (c) Mould making with the use of a core. (d) Casting	6
8	Electrical and Electronics Shop: (a) Study of tools & operations	6

Course Outcomes:	
1	To acquire skills in basic engineering practice, measuring skills and practical skills in the trades.
2	To provides the knowledge of job materials in various shops.
3	To identify the hand tools and instruments.
4	To provides the knowledge of core technical subjects for making and working ofany type of project.
5	Understand modern manufacturing operations, including their capabilities,limitations, and how to design economically.
6	Gain insight into how designers influence manufacturing schedule and cost, andcost of different components.
7	Learn how to analyze products and be able to improve their manufacturability andmake the cost effectively.

Suggested / Reference Books:	
1	Lab Manual to be provided by Department of Mechanical Engineering
2	Work shop technology by Hajra and Chaudhary
3	Work shop technology by Chapmen

ENL-101: COMMUNICATIVE ENGLISH

Credits: 02 (L= 2, T=0, U=0)
Total Marks-100

Mid Semester Examination: 20% weightage
End Semester Examination: 80% weightage

Objective: To introduce students to the skills and strategies of reading and writing by identifying organizational patterns, spotting classification systems and understanding associations between ideas. This course will prepare students to read a variety of texts and also to communicate more effectively through writing. The course will also pay special attention to vocabulary building.

Instructions for the Paper Setters:-
Eight questions of equal marks (Specified in the syllabus) are to be set, two in each of the four Sections (A-D). Questions may be subdivided into parts (not exceeding four). Candidates are required to attempt five questions, selecting at least one question from each Section. The fifth question may be attempted from any Section.

Prescribed Text Books:

- *The Written Word* by Vandana R. Singh, Oxford University Press, New Delhi.
- *Making Connections: A Strategic Approach to Academic Reading* by Kenneth J. Pakenham, Second Edition.

Section–A

"Word List", "Correct Usage of Commonly used words and Phrases" from the chapter "Vocabulary" given in ***The Written Word*** by Vandana R. Singh.

Section–B

Letter- writing as prescribed in ***The Written Word*** by Vandana R. Singh.
Report writing as prescribed in ***The Written Word*** by Vandana R. Singh.

Section–C

Section 1 from ***Making Connections: A Strategic Approach to Academic Reading*** by Kenneth J. Pakenham, Second Edition.

Section–D

Section 2 from ***Making Connections: A Strategic Approach to Academic Reading*** by Kenneth J. Pakenham, Second Edition.

Candidates are required to attempt five questions, selecting at least one question from each Section. The fifth question may be attempted from any Section.

Section – A

Meaning of Drug Abuse:

(i) Meaning, Nature and Extent of Drug Abuse in India and Punjab.
(ii) Consequences of Drug Abuse for:
Individual : Education, Employment, Income.
Family : Violence.
Society : Crime.
Nation : Law and Order problem.

Section – B

Management of Drug Abuse:

(i) Medical Management: Medication for treatment and to reduce withdrawal effects.
(ii) Psychiatric Management: Counselling, Behavioural and Cognitive therapy.
(iii) Social Management: Family, Group therapy and Environmental Intervention.

Section – C

Prevention of Drug Abuse:

(i) Role of family: Parent child relationship, Family support, Supervision, Shaping values, Active Scrutiny.
(ii) School: Counselling, Teacher as role-model. Parent-teacher-Health Professional Coordination, Random testing on students.

Section – D

Controlling Drug Abuse:

(i) Media: Restraint on advertisements of drugs, advertisements on bad effects of drugs, Publicity and media, Campaigns against drug abuse, Educational and awareness program
(ii) Legislation: NDPs act, Statutory warnings, Policing of Borders, Checking Supply/Smuggling of Drugs, Strict enforcement of laws, Time bound trials.

	SECTION - A	
1	Introduction: Force system, dimensions and units in mechanics, laws of mechanics,vectoralgebra, addition and subtraction of forces, cross and dot products of vectors, moment of aforceabout a point and axis, couple and couple moment, transfer of a force to a parallelposition,resultant of a force system using vector method, Problems involving vectorapplication. Equilibrium: Static and dynamic equilibrium, static in determinacy, general equationsofequilibrium, Varingnon's theorem, Lami's theorem, equilibrium of bodies under a forcesystem,Problems.	
	SECTION - B	
2	Truss and Frames: Truss, classification of truss, assumptions in truss analysis, perfect truss, analysis of perfect plane truss using method of joints and method of sections, Problems. Centroid, Centre of mass and Centre of gravity, Determination of centroid, centre of mass and centre of gravity by integration method of regular and composite figures and solid objects, Problems.	
	SECTION - C	
3	Moment of Inertia: Area moment of inertia, mass moment of inertia, parallel axis and perpendicular axis theorems, radius of gyration, polar moment of inertia, product of inertia, principle axis, problem based on composite figures and solid objects. Kinematics: Concept of rigid body, velocity and acceleration, relative velocity, translation and rotation of rigid bodies, equations of motion for translation and rotation, problems.	

SECTION - D		
4	Particle Dynamics: Energy methods and momentum methods, Newton's laws, work energy equation for a system of particles, linear and angular momentum equations, projectile motion, problem. Shear Force and Bending Moment Diagram for statically determinant beams Classification of beams, types of loads, shear force and bending moment calculation and their graphical presentation, point of inflection, problem.	

Course Outcomes:	
1	Basic understanding of laws and principles of mechanics.
2	Ability to analyse and solve simple problems of mechanics.
3	An understanding of assumptions and limitations of approaches used.

Course Objectives:

At the end of this course, the student should be able to understand the

1. Increase ability to communicate with people
2. Learn to sketch and take field dimensions.
3. Learn to take data and transform it into graphic drawings.
4. Learn basic CAD skills.
5. Learn basic engineering drawing formats
6. Prepare the student for future Engineering positions

1	Introduction: Instruments used, Lettering, Types of Lines used, Scales, Types of Projections in use, Dimensioning of Figures, etc.; Orthographic Projections of Points, Lines & Lamina **Lab Work:** Introduction to AutoCAD, Practice of 2D commands, Exercises related to the theory contents of Unit-I	12
	SECTION - B	
2	Projection of Solids: Section of Solids & its Projections; Interpenetration of Solids & Curve of Interpenetration; Development of Surfaces. **Lab Work:** Familiarity with 3D commands, Exercises related to the theory contents of Unit-II	12
	SECTION - C	
3	Isometric Drawing & Isometric Projection **Lab Work:** Lab Exercises related to the theory contents of Unit-III	12

SECTION - D		
4	Free-Hand sketching of Engineering Components, Advance 3D Commands: Solving Problems using AutoCAD. **Lab Work:** Lab Exercises related to the theory contents of Unit-IV	12

Course Outcomes:	
1	Student's ability to hand letter will improve.
2	Student's ability to perform basic sketching techniques will improve.
3	Students will be able to draw orthographic projections and sections.
4	Student's ability to use architectural and engineering scales will increase.
5	Student's ability to produce engineered drawings will improve.
6	Student's ability to convert sketches to engineered drawings will increase.
7	Students will become familiar with office practice and standards.
8	Students will become familiar with two and three dimensional drawings.
9	Students will develop good communication skills and team work.

Course Objectives:
At the end of this course, the student should be able to understand the:

1. To review physics and chemistry in the context of materials science & engineering.
2. To describe the different types of bonding in solids, and the physical outcomes of these differences.
3. Give an introduction to metals, ceramics, polymers, and electronic materials in the context of a molecular level understanding of bonding.
4. Give an introduction to the relation between processing, structure, and physical properties.
5. Give the beginning student an appreciation of recent developments in materials science & engineering within the framework of this class.
6. Give the beginning student practice in basic expository technical writing.

HSL–102: Punjab History & Culture (1717-1947)
(Special paper in lieu of Punjabi Compulsory)
(For those students who are not domicile of Punjab)

Credits: 2-0-0
Total Marks: 100

Mid Semester Examination: 20% weightage
End Semester Examination: 80% weightage

Instructions for the Paper Setters:
Eight questions of equal marks (Specified in the syllabus) are to be set, two in each of the four Sections (A-D). Questions may be subdivided into parts (not exceeding four). Candidates are required to attempt five questions, selecting at least one question from each Section. The fifth question may be attempted from any Section.

Section-A

1. Sikh Struggle for Sovereignty.
2. Ranjit Singh: Conquests, Administration and the Anglo-Sikh Relations.

Section-B

3. Anglo-Sikh Wars and the Annexation.
4. The Punjab under the British: New Administration, Education and social Change.

Section-C

5. Economic Changes: Agricultural
6. Socio-Religious Reform Movements.

Section-D

7. Role of Punjab in the Freedom Struggle.
8. Fairs and Festivals.

DRUG ABUSE: PROBLEM, MANAGEMENT AND PREVENTION
(COMPULSARY ID COURSE)
(Student can opt this Paper in 1st or 2nd Semester)
SOA–101: PROBLEM OF DRUG ABUSE

Time: 3 Hours **Credit 3-0-0**
Total Marks: 100

Mid Semester Examination: 20% weightage
End Semester Examination: 80% weightage

Instructions for the Paper Setters:
Eight questions of equal marks (Specified in the syllabus) are to be set, two in each of the four Sections (A-D). Questions may be subdivided into parts (not exceeding four). Candidates are required to attempt five questions, selecting at least one question from each Section. The fifth question may be attempted from any Section.

Section – A

Meaning of Drug Abuse:

i. Meaning, Nature and Extent of Drug Abuse in India and Punjab.
ii. Consequences of Drug Abuse for:
Individual : Education, Employment, Income.
Family : Violence.
Society : Crime.
Nation : Law and Order problem.

Section – B

Management of Drug Abuse:

i. Medical Management: Medication for treatment and to reduce withdrawal effects.
ii. Psychiatric Management: Counselling, Behavioural and Cognitive therapy.
iii. Social Management: Family, Group therapy and Environmental Intervention.

Section – C

Prevention of Drug Abuse:

i. Role of family: Parent child relationship, Family support, Supervision, Shaping values, Active Scrutiny.
ii. School: Counselling, Teacher as role-model. Parent-teacher-Health Professional Coordination, Random testing on students.

Section – D

Controlling Drug Abuse:

i. Media: Restraint on advertisements of drugs, advertisements on bad effects of drugs, Publicity and media, Campaigns against drug abuse, Educational and awareness program
ii. Legislation: NDPs act, Statutory warnings, Policing of Borders, Checking Supply/Smuggling of Drugs, Strict enforcement of laws, Time bound trials.

Lecture wise breakup		**Number of Lectures**
	SECTION - A	
1	**Partial Differential Equations**: Formation and solutions of partial differential equations, Lagrange's linear equation of the first order, Non-linear equations, Charpit's method, Homogeneous linear equations with constant co-efficients, Non-homogeneous linear equations, Method of separation of variables, Solution of wave equations, Heat flow equations, Laplace's equations and transmission line equations and their applications to engineering problems.	10
	SECTION - B	
2	**Integral Transforms:** Dirac-delta Function, Heaviside's Unit Function, Application of Laplace transform to differential equations, IVP and BVP; Applications of Fourier Transform to ODE and PDE, Z- Transforms, Hankel Transforms and its applications	12
	SECTION - C	
3	**Fundamental concept of Probability:** Classical and axiomatic approach to the theory of probability, additive and multiplicative law of probability, conditional probability and Bayes theorem.	10

SECTION - D		
4	**Probability distributions:** Introduction to discrete and continuous Random variables, probability functions, probability density function, cumulative distribution function and their properties, two dimensional random variables, joint distribution of several random variables, cumulative marginal and conditional distribution functions, Expected value. Bernoulli Trials, Binomial Distribution, Poisson and Normal Distribution, Expected value and variance of continuous and discrete random variables	12

Course Outcomes:	
1	To deal with functions of several variables that are essential in most branches of engineering.
2	The students will learn the mathematical tools needed in using applications of Laplace and Fourier Transforms.
3	The students will learn the essential tool of probability distributions in a comprehensive manner.

	SECTION – A	
1	**Simple Stresses and Strains-** Concept of stress and strain, St. Venant's principle, stress and strain diagram, Hooke's law, Young's modulus, Poisson's ratio, stress at a point, stresses and strains in bars subjected to axial loading, Modulus of elasticity, stress produced in compound bars subjected to axial loading. Temperature stress and strain calculations due to applications of axial loads and variation of temperature in single and compound walls.	8
2	**Compound Stresses and Strains**- Two dimensional system, stress at a point on a plane, principal stresses and principal planes, Mohr's circle of stress, ellipse of stress and their applications. Two dimensional stress-strain system, principal strains and principal axis of strain, circle of strain and ellipse of strain. Relationship between elastic constants.	8
	SECTION – B	
3	**Bending moment and Shear Force Diagrams**- Bending moment (BM) and shear force (SF) diagrams. BM and SF diagrams for cantilevers simply supported and fixed beams with or without overhangs. Calculation of maximum BM and SF and the point of contra flexure under concentrated loads, uniformly distributed loads over the whole span or part of span, combination of concentrated loads (two or three) and uniformly distributed loads, uniformly varying loads, application of moments.	6
4	**Theory of bending stresses**-Assumptions in the simple bending theory, derivation of formula: its application to beams of rectangular, circular and channel sections, Composite beams, bending and shear stresses in composite beams.	6

	SECTION – C	
5	**Slope and deflection**- Relationship between moment, slope and deflection, Moment area method, Macaulay's method. Use of these methods to calculate slope and deflection for determinant beams.	6
6	**Torsion** - Derivation of torsion equation and its assumptions. Applications of the equation of the hollow and solid circular shafts, torsional rigidity., Combined torsion and bending of circular shafts, principal stress and maximum shear stresses under combined loading of bending and torsion. Analysis of close-coiled-helical springs.	6
	SECTION - D	
7	**Thin Cylinders and Spheres**- Derivation of formulae and calculations of hoop stress, longitudinal stress in a cylinder, and sphere subjected to internal pressures.	4
8	**Columns and Struts**- Columns under uni-axial load, Buckling of Columns, Slenderness ratio and conditions. Derivations of Euler's formula for elastic buckling load, equivalent length. Rankine Gordon's empirical formula.	4

Course Objectives:

This course is designed to provide students with an overview of a wide variety of manufacturing processes for processing of engineering materials. The students will learn principles, operations and capabilities of various metal casting and metal joining processes. They will also learn about the defects, their causes and remedies in these processes. Upon completion of the course, the students should have the ability to understand the importance of the manufacturing processes and to select a suitable metal casting and metal joining processes to fabricate an engineering product.

	SECTION - A	
1	**General** Introduction-Manufacturing; definition and broad classification with typical examples of applications	2
2	**Casting**-Introduction; History of the technology; Definition and major classification; Casting materials, Sand mould casting: Basic principles with simple examples of a solid casting and a hollow casting. Patterns; types, material and design including pattern allowances; Moulding sands; composition, preparation, properties and testing; Core; Purpose, definition, materials, preparation and applications; Design of gating system; pouring basin, sprue, runner and risers; Advantages, limitations and applications of top gate, bottom gate, parting gate and step gate; Estimation of pouring time for top gate and bottom gate type moulds. Foundry equipment and furnaces. Melting, pouring and solidification. Principles, method, relative advantages and applications of floor mould casting, shell mould casting, pit mould and loam mould casting CO2 mould casting; centrifugal casting (pure, semi and centrifuging types) investment casting including mercasting; Permanent mould casting. Die casting; types, methods, relative advantages and applications Slush casting; principle and use, Casting defects; types, causes and remedy	16

SECTION – B		
3	**Forming Processes** - Introduction; General principles; major classification with typical examples; Hot working and cold working; principle, purpose, relative advantages and applications. Forging:-Definition and classification giving few example of application; work materials different forging operations, tools and equipment; Smithy, drop forging and press forging (pressing) methods and use; Forging dies ;types, materials and design. Rolling: Introduction; basic principles and general applications; Characteristics and applications of hot rolling and cold rolling; various rolling processes and applications and rolled products; Roll pass design for different products Wire drawing and Extrusion: Basic principles and requirements; Classification, methods and applications; work materials and products; Press tool works; Basic principles, system, operations and applications.	12
SECTION - C		
4	**Shearing** - Parting, notching, blanking and piercing. Cupping (drawing) and deep drawing. Design of blanks for any shearing and cupping operation. Estimation of forces and power required for shearing and cupping operations. Coining and embossing; basic principle and methods. Other forming processes: Principles, methods, essential requirements and applications of Spinning and flow turning; Bulging; Hydro forming; Magneto forming; Explosive forming.	5
SECTION - D		
5	**Welding**- Introduction: Major classes of joining; Mechanical joining; temporary, semi- permanent and permanent Giving examples; Welding; Brazing and soldering; Adhesive bonding; Welding in Liquid state. Fusion welding: - Introduction; basic principle, definition and major classification; characteristics and applications of different fusion welding processes using different heat-sources. Heat source:- chemical; gas welding; thermit welding; Heat source:- electrical; Arc welding; Manual arc welding; Submerged arc welding; TIG and MIG; Induction welding; Plasma arc welding; Resistance welding; Spot welding; Butt welding; Seam welding; Projection welding. Laser beam welding and electron beam welding. Solid state welding: - Principles. Methods, requirements and application of the different types; Solid state welding in hot condition; Forge welding; Friction welding; Diffusion welding; Solid state welding in cold condition; Ultrasonic welding. Pressure welding. Explosive welding. Welding defects; Types, causes, effects and remedy.	10

SECTION - A		
1	**Basic Concepts**- Basic concepts-concept of continuum, macroscopic approach, Thermodynamic systems - closed, open and isolated. Property, state, path and process, quasi- static process, work, modes of work. Zeroth law of thermodynamics, concept of temperature and heat. Concept of ideal and real gases.	5
2	**First Law of Thermodynamics**-Concepts of Internal Energy, Specific Heat Capacities, Enthalpy. Energy Balance for Closed and Open Systems, Energy Balance for Steady-Flow Systems. Steady-Flow Engineering Devices. Energy Balance for Unsteady-Flow	9

SECTION - B		
3	**Second Law of Thermodynamics**-Thermal energy reservoirs, heat engines energy conversion, Kelvin's and Clausius statements of second law, the Carnot cycle, the Carnot Theorem, the thermodynamic temperature scale, the Carnot heat engine, efficiency, the Carnot refrigeration and heat pump, COP. Clausius inequality, concept of entropy, principle of increase of entropy – availability, the increase of entropy principle, perpetual-motion machines, reversible and irreversible processes, Entropy change of pure substances, isentropic processes, property diagrams involving entropy, entropy change of liquids and solids, the entropy change of ideal gases, reversible steady-flow work, minimizing the compressor work, isentropic efficiencies of steady-flow devices, and entropy balance. Energy - a measure of work potential, including work potential of energy, reversible work and irreversibility, second-law efficiency, energy change of a system, energy transfer by heat, work, and mass, the decrease of energy principle and energy destruction, energy balance: closed systems and control volumes energy balance.	9
SECTION - C		
4	**Properties of Pure Substance**- Properties of pure substances. Thermodynamic properties of pure substances in solid, liquid and vapour phases. Phase rule, P-V, P-T, T-V, T-S, H-S diagrams, PVT surfaces. Thermodynamic properties of steam. Calculations of work done and heat transfer in non- flow and flow processes.	5
5	**Power Cycles**- Vapour and combined power cycles, including the Carnot vapor cycle, Rankine cycle: the ideal cycle for vapor power, the ideal reheat and regenerative and the second law analysis of vapour power cycles. Gas power cycles, including basic considerations in the analysis of power cycles, the Carnot cycle and its value in engineering, , an overview of reciprocating engines, air standard assumptions ,gasoline engine Otto cycle, diesel engine cycle, gas-turbine Brayton cycle, and the second-law analysis of gas power cycles.	8

SECTION - D		
6	**Ideal and Real Gases and Thermodynamic Relations**- Gas mixtures – properties ideal and real gases. Equation of state, Avogadro's Law, Vander Waal's equation of state, Compressibility factor, compressibility chart. Dalton's law of partial pressure. Exact differentials, T-D relations, Maxwell's relations. Clausius Clapeyron equations, Joule – Thomson coefficient.	3
7	**Psychrometry and psychrometric chart:** property calculations of air vapour mixtures. Psychrometric process – Sensible heat exchange processes. Latent heat exchange processes. Adiabatic mixing, evaporative cooling. Use of standard thermodynamic tables, Mollier diagram, Psychometric chart and Refrigerant property tables. Refrigeration cycles, including refrigerators and heat pumps, the ideal reversed Carnot vapour- compression refrigeration cycle, actual vapor- compression refrigeration cycles, heat pump systems, gas refrigeration cycles, and absorption refrigeration systems.	6

Course Objectives:

This course is designed to develop fundamental concepts of crystallography, phase transformation and heat treatment processes. The students will learn the atomic structure of metals, imperfections, diffusion mechanisms and theories of plastic deformation. They will also understand equilibrium diagrams, time-temperature transformation curves and heat treatment processes. Upon completion of the course, the students will be able to understand the concepts of crystal structure, microstructure and deformation. They will also be able to understand the phase diagrams which are useful for design and control of heat treating processes.

	Lecture wise breakup	**Number of lectures**
	SECTION - A	
1	**Basic Crystallography**- Crystal structure – BCC, FCC and HCP structure – unit cell – crystallographic planes and directions, miller indices. Crystal imperfections, point, line, planar and volume defects – Grain size, ASTM grain size number. Frank Reed source of dislocation Elastic & plastic modes of deformation, slip & twinning, strain hardening, seasons cracking, Bauschinger's effect, yield point phenomenon, cold/hot working, recovery, re-crystallization, and grain growth, strengthening of metals.	7
2	**Constitution of Alloys and Phase Diagrams**- Constitution of alloys – Solid solutions - substitutional and interstitial. Phase diagrams, Isomorphous, eutectic, peritectic, eutectoid and peritectoid reactions. Iron – Iron carbide equilibrium diagram. Classification of steel and cast Iron microstructure, properties and application.	7
	SECTION - B	
3	**Heat Treatment**-Definition – Full annealing, stress relief, recrystallisation and spheroidizing – normalising, hardening and tempering of steel. Isothermal transformation diagrams–cooling curves superimposed on I.T. diagram CCR Hardenability, Jominy end quench test Austempering, martempering. Case hardening, carburising, nitriding, cyaniding, carbonitriding – Flame and Induction hardening.	7

SECTION - C		
4	**Ferrous and Non Ferrous Metals**- Effect of alloying additions on steel (Mn, Si, Cr, Mo, V Ti & W) - stainless and tool steels – HSLA. Gray, White malleable, spheroidal –Graphite - alloy cast-iron. Copper and Copper alloys – Brass, Bronze and Cupronickel. Aluminium and Al-Cu – precipitation strengthening treatment – Bearing alloys.	5
5	**Non-Metallic Materials**- Polymers – types of polymer, commodity and engineering polymers – Properties and applications of PE, PP, PS, PVC, PMMA, PET, PC, PA, ABS, PI, PAI, PPO, PPS, PEEK, PTFE Polymers. Urea and Phenol formaldehydes. Engineering ceramics – Properties and applications of Al2O3, SiC, SiC, Si3, N4, PSZ etc. Fibre and particulate reinforced composites and resin plastics. Powder metallurgy, Manufacturing Process, Compacting, Sintering, Vacuum processing. Properties of Powder processed materials, high energy compaction. Metal matrix composites, preparation properties and uses.	7
SECTION - D		
6	**Mechanical Properties and Testing**- Mechanism of plastic deformation, slip and twinning. Types of fracture – Testing of materials under tension, compression and shear loads, hardness tests (Brinell, Vickers and Rockwell) Impact test, Izod and charpy, fatigue and creep test.	6
7	**Introduction to Science and Technology of Nano materials**- Nano structured materials, Low- dimensional structures: Quantum wells, Quantum wires, and Quantum dots, Nano clusters & Nano crystals. Electronic and optical properties of nano crystallites, Metallic and semiconducting super lattices. Synthesis of nanostructured materials, Fabrication and characterization of nano-electronic devices and MEMS. Basics of synthesis and characterization of nano-multi-component systems for sensors (magnetic, electronic and optical) and electrodes. Synthesis and fabrication of carbon nano structures for fuel cell and energy storage applications.	6

End Semester Examination	**:**	**80% weightage**

Course Objectives:

The objective of this course is to make students understand the principles and requirements of production drawings and learning how to assemble and disassemble important parts used in major mechanical engineering applications. After going through this course, the student shall be able to understand the drawings of mechanical components and their assemblies along with their utility for design of components.

	SECTION - A	
1	**Introduction:** Principles of Drawing, Requirements of production drawing, Sectioning and conventional representation, Dimensioning, symbols of standard tolerances, Machining Symbols, introduction and Familiarization of Code IS: 296	4
2	**Classification of Machine Drawings (with examples):** Assembly Drawing, Part Drawing, Detailed Drawing, Catalogues Drawing.	2
	SECTION - B	
3	**Conventional Representation of Machine Components:** screw threads, spring, gears, bearings, splined shaft	4
	SECTION - C	
4	**Assembly and Part Drawings:** couplings, clutches, bearings, gear assemblies, I.C. Engine components, valves, machine tools, etc.	25
	SECTION - D	
5	**Symbols:** Symbols for surface roughness, Weldments, process flow, electrical and instrumentation units.	2
6	**Solid Modeling:** Introduction to solid modelers, solid modeling of various machine parts.	4
7	**Project:** A **drawing** project.	4

ESL–220: ENVIRONMENTAL STUDIES
(Compulsory ID Course)

Credits: 4-0-0

Teaching Methodologies
The Core Module Syllabus for Environmental Studies includes class room teaching and field work. The syllabus is divided into 8 Units [Unit-1 to Unit-VII] covering 45 lectures + 5 hours for field work [Unit-VIII]. The first 7 Units will cover 45 lectures which are class room based to enhance knowledge skills and attitude to environment. Unit-VIII comprises of 5 hours field work to be submitted by each candidate to the Teacher in-charge for evaluation latest by 15 December, 2019.

Exam Pattern: **End Semester Examination- 75 marks**
Project Report/Field Study- 25 marks [based on submitted report]
Total Marks- 100

The structure of the question paper being:

Part-A, Short answer pattern with inbuilt choice – **25 marks**
Attempt any five questions out of seven distributed equally from Unit-1 to Unit-VII.
Each question carries 5 marks. Answer to each question should not exceed 2 pages.

Part-B, Essay type with inbuilt choice – **50 marks**
Attempt any five questions out of eight distributed equally from Unit-1 to Unit-VII. Each question carries 10 marks. Answer to each question should not exceed 5 pages.

Project Report / Internal Assessment:

Part-C, Field work – **25 marks [Field work equal to 5 lecture hours]**
The candidate will submit a hand written field work report showing photographs, sketches, observations, perspective of any topic related to Environment or Ecosystem. The exhaustive list for project report/area of study are given just for reference:

1. Visit to a local area to document environmental assets: River / Forest/ Grassland / Hill / Mountain / Water body / Pond / Lake / Solid Waste Disposal / Water Treatment Plant / Wastewater Treatment Facility etc.
2. Visit to a local polluted site – Urban / Rural / Industrial / Agricultural
3. Study of common plants, insects, birds
4. Study of tree in your areas with their botanical names and soil types
5. Study of birds and their nesting habits
6. Study of local pond in terms of wastewater inflow and water quality
7. Study of industrial units in your area. Name of industry, type of industry, Size (Large, Medium or small scale)
8. Study of common disease in the village and basic data from community health centre
9. Adopt any five young plants and photograph its growth
10. Analyze the Total dissolved solids of ground water samples in your area.
11. Study of Particulate Matter ($PM_{2.5}$ or PM_{10}) data from Sameer website. Download from Play store.
12. Perspective on any field on Environmental Studies with secondary data taken from Central Pollution Control Board, State Pollution Control Board, State Science & Technology Council etc.

Unit-I

The multidisciplinary nature of environmental studies

Definition, scope and importance, Need for public awareness

(2 lectures)

Unit-II

Natural Resources: Renewable and non-renewable resources:

Natural resources and associated problems.

(a) Forest resources: Use and over-exploitation, deforestation, case studies. Timber extraction, mining, dams and their effects on forests and tribal people.

(b) Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems.

(c) Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies.

(d) Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies.

(e) Energy resources: Growing energy needs, renewable and non-renewable energy sources, use of alternate energy sources, case studies.

(f) Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification.

- Role of an individual in conservation of natural resources.
- Equitable use of resources for sustainable lifestyles.

(8 Lectures)

Unit-III

Ecosystems

- Concept of an ecosystem
- Structure and function of an ecosystem
- Producers, consumers and decomposers
- Energy flow in the ecosystem
- Ecological succession
- Food chains, food webs and ecological pyramids
- Introduction, types, characteristic features, structure and function of the following ecosystem: Forest ecosystem, Grassland ecosystem, Desert ecosystem, Aquatic ecosystems (ponds, streams, lakes, rivers, ocean estuaries)

(6 Lectures)

Unit-IV

Biodiversity and its conservation

- Introduction – Definition: genetic, species and ecosystem diversity
- Biogeographical classification of India
- Value of biodiversity: consumptive use, productive use, social, ethical aesthetic and option values
- Biodiversity at global, national and local levels
- India as a mega-diversity nation
- Hot-spots of biodiversity
- Threats to biodiversity: habitat loss, poaching of wildlife, man wildlife conflicts
- Endangered and endemic species of India
- Conservation of biodiversity: In-situ and Ex-situ conservation of biodiversity

(8 Lectures)

Unit-V

Environmental Pollution

Definition

- Causes, effects and control measures of Air pollution, Water pollution, Soil pollution, Marine pollution, Noise pollution, Thermal pollution, Nuclear pollution
- Solid waste management: Causes, effects and control measures of urban and industrial wastes.
- Role of an individual in prevention of pollution
- Pollution case studies
- Disaster management: floods, earthquake, cyclone and landslides

(8 Lectures)

Unit-VI

Social Issues and the Environment

- From unsustainable to sustainable development
- Urban problems and related to energy
- Water conservation, rain water harvesting, watershed management
- Resettlement and rehabilitation of people; its problems and concerns. Case studies.
- Environmental ethics: Issues and possible solutions
- Climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust. Case studies.
- Wasteland reclamation
- Consumerism and waste products
- Environmental Protection Act, 1986
- Air (Prevention and Control of Pollution) Act, 1981
- Water (Prevention and control of Pollution) Act, 1974
- Wildlife Protection Act
- Forest Conservation Act
- Issues involved in enforcement of environmental legislation
- Public awareness

(7 Lectures)

Unit-VII

Human Population and the Environment

- Population growth, variation among nations
- Population explosion – Family Welfare Programmes
- Environment and human health
- Human Rights
- Value Education
- HIV / AIDS
- Women and Child Welfare
- Role of Information Technology in Environment and Human Health
- Case Studies

(6 Lectures)

Unit-VIII

Field Work

- Visit to a local area to document environmental assets river/forest/grassland/hill/mountain
- Visit to a local polluted site – Urban / Rural / Industrial / Agricultural
- Study of common plants, insects, birds
- Study of simple ecosystems-pond, river, hill slopes, etc

(Field work equal to 5 lecture hours)

1	Creating a One-Dimensional Array (Row / Column Vector) Exercise – Creating a vector of even whole numbers between 31 and 75; Creating a Two-Dimensional Array (Matrix of given size) and (A). Performing Arithmetic Operations - Addition, Subtraction, Multiplication and Exponentiation. (B). Obtaining Modified Matrix - Inverse, Transpose, with Appended and Deleted Elements.	2
2	Performing Matrix Manipulations - Concatenating, Indexing, Sorting, Shifting, Reshaping, Resizing and Flipping about a Vertical Axis / Horizontal Axis; Creating Arrays X & Y of given size (1 x N) and Performing (A). Relational Operations - >, <, ==, <=, >=, ~= (B). Logical Operations - ~, &, |, XOR	2
3	Generating a set of Commands on a given Vector (Example: X = [1 8 3 9 0 1]) to (A). Add up the values of the elements (Check with sum) (B). Compute the Running Sum (Check with sum), where Running Sum for element j = the sum of the elements from 1 to j, inclusive. (C). Compute the Sine of the given X-values (should be a vector). Also, Generating a Random Sequence using rand()/randn() functions and plotting them.	2
4	Evaluating a given expression and rounding it to the nearest integer value using Round, Floor, Ceil and Fix functions; Also, generating and Plots of (A) Trigonometric Functions - *sin(t), cos(t), tan(t), sec(t), cosec(t) and cot(t)* for a given duration ' *t*'. (B). Logarithmic and other Functions – log(A), log10(A), Square root of A, Real nth root of A.	2

5	*Creating a vector X with elements, Xn = (-1)(n+1) (2n-1) and adding up 100 elements of the vector X; and plotting the function, x, x3, ex and exp(x.x), the interval 0<x<4* (by choosing appropriate mesh values for x to obtain smooth curves), on (A). A Rectangular Plot (B). A Semi log Plot (C). A log-log Plot.	2
6	Generating a Sinusoidal Signal of a given frequency (say, 100Hz) and Plotting with Graphical Enhancements - Titling, Labelling, Adding Text, Adding Legends, Adding New Plots to Existing Plot, Printing Text in Greek Letters, Plotting as Multiple and Sub-Plots; *Also,* Making Non-Choppy and Smooth Plot of the functions, *f(x) = sin(1/x)* for *0.01 < x < 0.1* and *g(x) = (sin x)/ x*.	2
7	Creating A Structure, An Array of Structures and Writing Commands to Access Elements of the created Structure and Array of Structures; *Also,* Solving First Order Ordinary Differential Equation using Built-in Functions; *And,* Creating an M x N Array of Random Numbers using **rand** and setting any value that is < 0.2 to „0' and any value that is ≥ 0.2 to „1' by moving through the Array, Element by Element;	2
8	Generating normal and integer random numbers (1-D & 2-D) and plotting them; *Also,* Writing a Script (which keeps running until no number is provided to convert) that asks for Temperature in degrees Fahrenheit and Computes the Equivalent Temperature in degrees Celsius. [Hint: Function **is empty** is useful]	2
9	Writing brief Scripts starting each Script with a request for input (using input) to Evaluate the function h(T) using if-else statement, where h(T)=(T – 10) for 0 < T < 100 =(0.45T+900) for T>100 Exercise: Testing the Scripts written using A). T = 5, h = -5 and B). T = 110, h = 949.5 Also, Creating a Graphical User Interface (GUI); And, Curve Fitting using (A) Straight line Fit (B). Least Squares Fit	2
10	Interpolation based on following Schemes (A). Linear (B). Cubic (C). Spline Also, Generating the first Ten Fibonacci numbers according to the relation Fn = Fn-1 + Fn-2 with F0 = F1 = 1, and Computing the ratio Fn / Fn-1 for the first 50 Fibonacci numbers. [Exercise: Verifying that the computed ratio approaches the value of the golden mean (1 + sqrt(5)) / 2]; Also Generating Equivalent Square Wave from a Sine Wave of given Amplitude and Frequency; And,. Obtaining the Covariance & Correlation Coefficient Matrices for a given Data Matrix.	2

Planar kinematics of rigid bodies, systems of rigid bodies and particles, problem formulation and solution methods for the dynamic equations of motions for planar motion of rigid bodies, develop simplified, rigid body models for systems of mechanical components, introduce the concepts and uses of work and kinetic energy, understand fundamental concepts and solution strategies for cams, mechanical vibration problems, gears, concept of balancing. The students will understand the basic concepts of machines and able to understand constructional and working features of important machine elements. The students should be able to understand various parts involved in kinematics of machines for different applications. The students shall also be able to understand requirements of basic machine parts which would help them to understand the design aspects of the machine parts.

Total No. of Lectures-45

	Lecture wise breakup	**Number of lectures**
	SECTION - A	
1	**Basic Concepts and Properties**- Fluid – definition, distinction between solid and fluids and dimensions - Properties of fluids - density, specific weight, specific volume, specific gravity, temperature, viscosity, compressibility, vapour pressure, capillary and surface tension. Fluid statics concept of fluid static pressure, absolute and gauge pressures–pressure measurements by manometers and pressure gauges. Hydrostatic forces on submerged surfaces, Stability of floating bodies.	5
	SECTION - B	
2	**Fluid Kinematics and Fluid Dynamics**- Fluid Kinematics - Flow visualization - lines of flow- types of flow - velocity field and acceleration - continuity equation (one and three dimensional differential forms)- Equation of streamline - stream function – velocity potential function - circulation - flow net. Fluid dynamics - equations of motion - Euler's equation along a streamline - Bernoulli's equation, applications - Venturi meter, Orifice meter, Pitot tube. Dimensional analysis - Buckingham's Pei theorem- applications - similarity laws and models.	12

SECTION - C		
4	**Incompressible Fluid Flow**- Viscous flow - Navier - Stoke's equation (Statement only) - Shear stress, pressure gradient relationship - laminar flow between parallel plates – Laminar flow through circular tubes. (Hagen Poiseulle's equation). Hydraulic and energy gradient - flow through pipes - Darcy -Weisback's equation – pipe roughness -friction factor- Moody's diagram-minor losses - flow through pipes in series and in parallel – power transmission. Boundary layer flows, boundary layer thickness and boundary layer separation. Drag and lift coefficients.	16
	Hydraulic Turbines- Fluid machines definition and classification - exchange of energy - Euler's equation for turbo machines - Construction of velocity vector diagram's - head and specific work - components of energy transfer - degree of reaction. Hydro turbines definition and classifications - Pelton turbine - Francis turbine - propeller turbine Kaplan turbine .Working principles - velocity triangles - work done - specific speed – efficiencies - performance curve for turbines.	
SECTION - D		
6	**Hydraulic Pumps**-Pumps definition and classifications. Centrifugal pump classifications, working principles, velocity triangles, specific speed, efficiency and performance curves. Reciprocating pump classification, working principles, indicator diagram, work saved by air vessels and performance curves, cavitation in pumps Rotary pumps working principles of gear and vane pumps.	12

To impart basic knowledge about the measurement systems and their components and various methods of engineering metrology.

Total No. of Lectures-45

	Lecture wise breakup	**Number of lectures**
	SECTION - A	
1	**Introduction to measurements-** Errors in measurements, Statistical analysis of data, Regression analysis, correlation, estimation of uncertainty and presentation of data, design of experiments.	8
2	**Measurement of field quantities-** like temperature, pressure, velocity by intrusive and non- intrusive techniques under various conditions met with in practice like steady and transient conditions.	8
	SECTION - B	
3	**Measurement of derived quantities-** like heat flux, volume/mass flow rate, temperature in flowing fluids.	5
4	**Measurement of thermo-physical properties-** radiation properties of surfaces, vibration and noise.	5
	SECTION - C	
5	**Computer assisted data acquisition-** data manipulation, data presentation.	5
	SECTION - D	
6	**Metrology:** 1. Measurement of length, measurement of angle 2. Limits and fits 3. Measurement of geometric forms, straightness, flatness, roundness etc. Mechanical and optical methods. 4. Measurement of screw threads and gears. 5. Measurement of surface roughness and texture 6. Introduction to CMM. In-process gages. *7.* Inspection and quality monitoring.	14

	Lecture wise breakup	**Number of lectures**
	SECTION - A	
1	**Introduction to Control**- Brief history and developments in Feedback control.	4
2	**Modeling of Physical Systems-** Mechanical, electrical, thermal and hydraulic systems. Concepts of state, state variable, state model. State models for linear continuous time functions, state space model formulation. Block diagram and signal flow graph analysis, transfer function. (Modern approaches such as Bond graphs may be used for modeling and control.)	9
	SECTION - B	
3	**System Response-** Time response of first and second-order systems, Steady-state errors and error constants. Performance specifications in time-domain. Effect of pole locations. Concept of stability, relative stability, Routh's stability criterion. Root locus method of analysis and design. Lead and lag compensation.	9
	SECTION - C	
4	**Frequency-Response Analysis-** Relationship between time & frequency response, Polar plots, Bode's plot, stability in frequency domain, Nyquist plots. Nyquist stability criterion. Performance specifications in frequency-domain. Frequency-domain methods of design. Compensation and their realization in time and frequency domains.	9
	SECTION - D	
5	**State Variable Analysis-** Solution of state equations. Concepts of controllability and observability. Pole placement design. Proportional, Integral and derivative feedback. Simple case studies.(These may be supported using software such as MATLAB.)	9

Course Objectives:
To introduce the fundamentals of vibration and noise control and application of these principles to real life problems.

Total No. of Lectures – 45

Lecture wise breakup		**Number of lectures**
SECTION - A		
1	**Vibration of single degree of freedom (SDF) system**-Modelling of stiffness and damping (both Viscous and Coulomb). Estimation of damping by decay plots and half power method. Impulse, transient and forced vibration response of SDF system. Theory and practice of vibration isolation. Vibration measuring instruments.	6
2	**Two degree freedom system** – Application to undamped and damped absorbers. Multi- degree freedom systems.	8
SECTION - B		
3	**Modal analysis**. Rayleigh's and Dunkerley's method. Holzer's and transfer matrix methods.	8
4	**Continuous systems** –Governing wave equation and Euler-Bernoulli equation. Free and forced vibrations including modal analysis.	8
SECTION - C		
5	**Finite element analysis** – Dynamic analysis of simple systems. Introduction to modal testing and system identification problems.	8

SECTION - D		
6	**Acoustics and Noise Control**- Acoustic wave equation, Acoustic energy and sound intensity. Propagation of sound, Concept of Acoustic impedance. Sound power transmission, Transmission Loss. Human Response and ratings, Various Measures of Sound. Weighting filters, Loudness, Indices of Loudness. Acoustic radiation from spherical source and piston source. Acoustic sensors. Measuring Techniques and Instruments, Octave Filtering, Sound Intensity Measurement, Intensity Mapping. Different types of measurement environment and uses. Sound absorption coefficient. Noise control measures in building. Reverberation time and auditorium design. Industrial Noise control, Noise in Machinery, Traffic Noise, Vehicle Noise. Design of silencers and mufflers. Active noise control.	7

To impart basic knowledge of heat and mass transfer mechanisms.

Total No. of Lectures – 48

Lecture wise breakup		**Number of lectures**
SECTION - A		
1	**Introduction-**Modes and mechanisms of heat transfer: Basic laws of heat transfer, General discussion about applications of heat transfer. Conduction heat transfer: Fourier rate equation, General heat conduction equation in Cartesian, cylindrical and spherical coordinates. Simplification and forms of the field equation: steady, unsteady and periodic heat transfer, Initial and boundary conditions.	8
SECTION - B		
2	**One Dimensional Steady State Conduction-** Heat transfer in homogeneous slabs, hollow cylinders and spheres overall heat transfer coefficient electrical analogy critical radius of insulation. Variable thermal conductivity systems with heat sources of heat generation. Extended surface (fins) heat transfer along a fin, fin with insulated tip and short fin. Application to error measurement of temperature.	10
3	**One Dimensional Transient Conduction Heat Transfer**- Systems with negligible internal resistance; Significance of Biot and Fourier numbers. Chart solutions of transient conduction systems- concept of functional body.	6
SECTION - C		
4	**Convective Heat Transfer-** Classification of systems based on causation of flow, condition of flow, configuration of flow and medium of flow. Dimensional analysis as a tool for experimental investigation. Buckingham Pi-Theorem and method. Application for developing semi-empirical non- dimensional correlation for convection heat transfer, significance of non- dimensional numbers. Concepts of continuity. Momentum and energy equations. Forced convection: External flows: Concepts about hydrodynamic and thermal boundary layer and use of empirical correlations for convective heat transfer. Flat plates and cylinders. Internal Flows: Concepts about hydrodynamic and thermal entry lengths division of internal flow based on this use of empirical relations for horizontal pipe flow and annulus flow.	8
5	**Free Convection-** Development of hydrodynamic and thermal boundary layer along a vertical plate. Use of empirical relations for vertical plates and pipes.	4

SECTION - D		
6	**Heat Transfer with Phase Change-** Boiling: Pool boiling regimes calculations on nucleate boiling, critical heat flux and film boiling. Condensation: Film wise and drop wise condensation, Nusselt Theory of condensation on a vertical plate-Film condensation on vertical and horizontal cylinders using empirical correlations. Heat Exchangers- Classification of heat exchangers overall heat transfer-Coefficient and fouling factor. Concepts of LMTD and NTU methods - Problems using LMTD and NTU methods.	6
7	**Radiation Heat Transfer-** Emission characteristics and laws of black-body radiation, Irradiation total and monochromatic quantities, laws of Planck, Wien, Kirchhoff, Lambert, Stefan and Boltzmann, heat exchange between two black bodies, concepts of shape factor. Emissivity heat exchange between grey bodies radiation shields electrical analogy for radiation networks.	6

SECTION - A		
1	**Strain Energy & Impact Loading:** Definitions, expressions for strain energy stored in a body when load is applied (i) gradually, (ii) suddenly and (iii) with impact, strain energy of beams in bending, beam deflections, strain energy of shafts in twisting, energy methods in determining spring deflection, Castigliano's & Maxwell's theorems, Numericals.	5
2	**Theories of Elastic Failure:** Various theories of elastic failures with derivations and graphical representations, applications to problems of 2- dimensional stress system with (i) Combined direct loading and bending, and (ii) combined torsional and direct loading, Numericals.	7
SECTION - B		
3	**Unsymmetrical Bending**: Properties of beam cross section, product of inertia, ellipse of inertia, slope of the neutral axis, stresses & deflections, shear center and the flexural axis Numericals.	7
4	**Thick Cylinders & Spheres:** Derivation of Lame's equations, radial & hoop stresses and strains in thick and compound cylinders and spherical shells subjected to internal fluid pressure only, wire wound cylinders, hub shrunk on solid shaft, Numericals.	7
SECTION - C		
5	**Rotating Rims & Discs:** Stresses in uniform rotating rings & discs, rotating discs of uniform strength, stresses in (i) rotating rims, neglecting the effect of spokes, (ii) rotating cylinders, hollow cylinders & solids cylinders. Numericals.	7
6	**Bending of Curved Bars** : Stresses in bars of initial large radius of curvature, bars of initial small radius of curvature, stresses in crane hooks, rings of circular & trapezoidal sections, deflection of curved bars & rings, deflection of rings by Castigliano's theorem stresses in simple chain link, deflection of simple chain links, Problems.	5

SECTION - D		
7	**Springs:** Stresses in open coiled helical spring subjected to axial loads and twisting couples, leaf springs, flat spiral springs, concentric springs, Numericals.	7

1	**Introduction-** Welding as a production process – its advantages and limitations. Gas welding process, Types of fuels, acetylene, Indene, Butane etc. Gas welding equipment, gas welding technique. Electric arc welding – manual metal arc welding – power supplies, cables and other accessories for arc welding, welding technique - atomic, hydrogen welding, thermit welding, soldering, brazing and braze welding.	8
2	**Special Welding Processes-** Power sources, equipments and accessories, application, limitation and other characteristics of: (a) Gas tungsten arc (TIG) welding (b) Gas metal arc (MIG) welding (c) Submerged arc welding (d) Electro slag welding processes. Resistance welding processes- principle- Types (spot, seam, projection and percussion flash), equipment required for each application.	8
SECTION - B		
3	**Modern Welding Processes-**Electron beam welding, Laser beam welding, Plasma arc welding, Friction welding, Explosive welding, Ultrasonic welding, Stud welding, Under water welding, Diffusion bonding, Cold welding, Welding of dissimilar metals.	8
SECTION - C		
3	**Weldment Testing-** Defects in welding in various processes-Causes and remedies; Destructive testing of weldments - Strength, hardness, ductility, fatigue, creep properties etc. Non- destructive testing of weldments; Ultrasonic dye penetrant, magnetic particle inspection. X ray testing procedures and identification of defects – case studies. Weld thermal cycle – Residual stressed distortion in welding stress relieving techniques.	9

SECTION - D		
5	**Weldability, Automation and Design in Welding**- Weldability –definition. Temperature distribution in welding –heat affected zone weldability of steel, cast iron. Aluminum, pre heating and post heating of weldments. Estimation of transition temperature. Automation in welding – Seam tracking vision and arc sensing welding robots. Design of weldments-welding symbols positions of welding joint and groove design. Weld stress –calculations – design of weld size.	9

Lecture wise breakup		**Number of lectures**
Non-Traditional Manufacturing		
SECTION – A		
1	**Introduction-** Classifications of material removal processes. Characteristics of conventional material removal (machining) processes. Need for non-conventional or non- traditional processes	5
2	**Process Description, Modelling, Application and Product Quality Related Issues-** Abrasive Jet Machining. Ultrasonic Machining. Water Jet Machining. Abrasive Water Jet Machining. Electro-Discharge Machining. Chemical & Photo Chemical Machining. Electro- Chemical Machining. Electron Beam Machining. Laser Beam Machining.	11
SECTION – B		
3	**Advanced Topics-** Basic introduction to chemical, physical vapour deposition processes. Thermal spraying processes. Hybrid processes like electro-jet drilling, electro chemical grinding, electro-chemical discharge machining. Rapid prototyping.	8
Computer Aided Manufacturing		
SECTION – C		
1	**Introduction-** Relation between production volume and flexibility. Various manufacturing systems – batch, mass, group, cellular and flexible manufacturing systems; Type of automation and benefits of soft or flexible automation. Automation in material handling and assembly.	6

	SECTION - D	
2	**CNC Machines-** Introduction, classification, design and control features including interpolations.	4
3	NC Part-Programming.	4
4	**Introduction to Robotics-**Definitions, motivation, historical development. Basic structure, classification, workspace, drives, controls, sensors, grippers, specifications.	8

Analytical approach to the engineering problem and performance analysis of internal combustion engines. Study of thermodynamics, combustion, heat transfer, friction, and other factors affecting engine power, efficiency, and emissions. Design and operating characteristics of different types of engines.

Total No. of Lectures-45

	Lecture wise breakup	**Number of lectures**
	SECTION – A	
1	**Basic Concepts-**Air standard cycles and fuel-air cycles, assumptions, Otto, Diesel & dual cycles, comparison of cycles, fuel air cycle, valve timing diagram, actual engine cycle.	5
2	**S.I. Engines-** Theory of carburetion, types of carburetors, electronic fuel injection system, GDI. Combustion in spark ignition engines, stages of combustion, flame propagation, rate of pressure rise, abnormal combustion. Phenomenon of detonation in SI engines, effect of engine variables on detonation. Combustion chambers. Rating of fuels in SI engines. Additives.	8
	SECTION – B	
3	**C.I. Engines-** Fuel supply system, types of fuel pump, injector and distribution system, combustion in compression ignition engines, stages of combustion, factors affecting combustion, Phenomenon of knocking in CI engine. Effect of knocking. Types of combustion chambers rating of fuels in CI engines. Additives; Comparison of knocking in SI & CI engines, concepts of supercharging and turbo charging.	8
4	**Engine Systems and Components-**Ignition system (battery, magneto & electronic); lubrication system; engine starting system; engine cooling system; governing system (quality and quantity hit & miss governing); intake and exhaust systems (two valves & four valves); drive train (cam shaft, valves etc.)	8

SECTION – C		
5	**Performance Characteristics & Testing of I.C. Engines-**Introduction to Indian Standards for testing of I.C. engine, mean effective pressure, indicated power, brake power, friction power, methods to determine power and efficiencies, variables affecting performance of engine, characteristic curves, heat balance sheet, methods of improving engine performance; super & turbocharged engines.	8
SECTION - D		
6	**Fuels and Emissions-** Chemical structure of the petroleum, refining process for petroleum, important qualities of the engine fuels - (SI & CI engines) and diesel and gasoline fuels- Indian specifications. Alternate fuels (SI & CI engines)- Liquid fuels, gaseous fuels, hydrogen engines (LPG, HC NG (15%, 20%, 25 % blends) Hydrogen and bio-fuels), Air pollution due to IC engine, engine emissions, hydrocarbon emissions, (HC) & PPM & carbon monoxide emissions (CO), oxides of Nitrogen (NOx) Euro norms , Bharat stage norms, Introduction to EDC and IDC , Introduction to carbon credit, emission control methods for SI and CI engines, electronic control , catalytic converters, EGR concept of hybrid vehicles.	8

1	**Introduction-**Necessity and applications; of refrigeration and C.O.P. Mechanical refrigeration; Types of ideal cycles of refrigeration. Air refrigeration: Bell Coleman cycle and Brayton cycle, open and dense air systems; Actual air refrigeration system problems; Refrigeration needs of aircrafts.	4
	SECTION – B	
2	**Vapour Compression Refrigeration-** Working principle and essential components of the plant; Simple vapour compression refrigeration cycle; COP; Representation of cycle on T-S and p-h charts; effect of sub cooling and super heating; cycle analysis; Actual cycle Influence of various parameters on system performance; Use of p-h charts; numerical problems.	6
3	**Refrigeration System Components-**Compressors; General classification; comparison; Advantages and disadvantages. Condensers: classification; Working principles. Evaporators: classification; Working principles. Expansion devices: Types; Working principles. Refrigerants: Desirable properties; classification refrigerants used; Nomenclature; Ozone depletion; Global warming.	7
	SECTION – C	
4	**Vapor Absorption Refrigeration-** Calculation of max COP; description and working of NH3; water system and Li Br; water (Two shell & four shell) system. Principle of operation Three fluid absorption system, salient features.	7
5	**Other Refrigeration Systems-** Steam Jet refrigeration system; Working principle and basic components. Principle and operation of (i) Thermoelectric refrigerator (ii) Vortex tube tube.	7

SECTION - D		
6	**Introduction-** Psychometric properties & processes; Characterization of sensible and latent heat loads; Need for ventilation, consideration of infiltration; Load concepts of RSHF, GSHF- problems, concept of ESHF and ADP. Requirements of human comfort and concept of effective temperature; Comfort chart; Comfort Air conditioning; Requirements of industrial air conditioning ;	7
7	**Air Conditioning System Components-**Equipment for cooling, heating humidification and dehumidification, filters, grills and registers, fans and blowers. Heat pump; Heat sources, different heat pump circuits.	7

1	**Introduction-** Mechatronics: What and why?	2
2	**Essential Electronics and Boolean Algebra-** Digital representation: binary, decimal, hexadecimal, conversion from binary to decimal and vice-versa. Binary arithmetic: addition, subtraction: 2's complement, multiplication and division, boolean algebra: AND, OR, NOT, NAND, NOR, XOR logic, Truth table, realization of logic in physical systems: switches-LEDs, cylinders. Fundamental identities, De Morgan's theorems and relationship with sets, simplification, electronics fundamentals: Review of some semiconductor devices, Concepts of digital and analog systems, digital output (DO) and input (DI), using switches, transistors, pneumatic devices, etc. to realize DI & DO. Operational Amplifier: principles, configurations: inverting; summing; integrating and differentiating configurations, digital to analog conversion (DAC), the R-2R and summing op-amp circuit, analog to digital conversion (ADC), successive approximation method, flash method, etc. Programs for DI, DO, DA and AD for PC based plug in cards.	16
	SECTION – B	
3	**Microprocessor, Computers and Embedded Systems-** Introduction to the 8085 (8-bit microprocessor) and microcontroller: Architecture, programming, I/O, Computer interfacing, Programmable logic controller basics.	6

SECTION – C		
4	**Sensors and Actuators-** Strain gauge, resistive potentiometers, tactile and force sensors, tachometers, LVDT, piezoelectric accelerometer, hall effect sensor, optical encoder, resolver, inductosyn, pneumatic and hydraulic actuators, stepper motor, DC motor, AC motor.	8
SECTION - D		
5	**Control Systems**-Mathematical modeling of physical systems, system equations, controllability and observability, Pole placement, PID controller, control of hydraulic, pneumatic, mechanical and electrical systems.	8
6	**Integration and Case Studies-** Integration of mechatronics component subsystems into a complete mechatronics system, applications to CNC machines and robotics.	5

Lecture wise breakup		**Number of lectures**
SECTION - A		
1	**Introduction -** Analysis of steam cycles, optimization of reheat pressure and degree of regeneration, coupled cycles and combined plants, process heat and power. Fuels and their properties, stoichiometric and actual air requirements, flue gas analysis.	6
2	**Boilers -** Different types of boilers, boiler mountings, feed water treatment, boiler loading and manner of operation. Boiler energy balance, draft system. Different types of furnaces for burning coal, fuel oil and gas. Circulation theory, down-comers and risers, economizers and super-heaters, air pre-heater, drum and its internals.	12
SECTION - B		
3	**Steam Turbines -** Convergent and convergent-divergent nozzles - theory and design. Impulse and reaction turbines, compounding of turbines, optimum velocity ratio, reheat factor and condition line, parallel exhaust, losses in steam turbines, steam turbine governing.	8
SECTION - C		
4	**Plant Components -** Theory and design of condensers, air ejector and cooling towers. Types and applications.	6
5	**Facility Location and Layout -** Power Plant Economics & Environmental Considerations- Plant energy studies: concepts and resources, procedures and implementation.	6
SECTION - D		
6	**Energy accounting**- Various thermal systems and energy management. Electrical load management. Economic analysis. Waste heat recovery. Multi objective energy management conservation, pollution control and evaluation of alternative energy sources. Cost of energy management and payback.	7

	SECTION - A	
1	**Introduction-** Classifications of manufacturing processes, characteristics of material removal processes, need and purpose of conventional material removal processes. Basic description of conventional machining processes, identification of process parameters, concept of machinability. General Constructional Configuration of Basic Machine Tools- Constructional configuration and specifications of basic machine tools like lathe, drilling machine, shaping machine, milling machine, grinding machine. Concept of generatrix and directrix.	5
2	**Basic Kinematic Structure of Centre Lathe-** Kinematic analysis of: Speed Gear Box, Feed Gear Box, Apron Mechanism, Thread Cutting. Tool Geometry- Detailed discussions restricted to ASA, ORS and MRS and for single point cutting tool as well as WRS, Introduction to NRS. Introduction to tool geometry of milling cutters and drills.	6
3	**Mechanism of Chip Formation-** Detailing on chip formation mechanism of brittle and ductile work material. Chip reduction coefficient, shear angle. Kronenberg's relation. Build-up edge (BUE). Cutting strain, cutting strain rate, orthogonal machining, causes and modelling of chip deviation concept of effective rake, concept of oblique machining. Effect of process parameters and tool geometry on mechanism of chip formation. Introduction to characteristics of chip formation in milling.	6

SECTION - B		
4	**Mechanics of machining-** Identification of cutting forces on orthogonal plane. Merchant's circle diagram, interrelations between cutting forces, angle relationships. Merchant's 1st solution, 2nd solution and Lee and Shaffer's solution. Cutting forces in turning, milling, shaping and drilling. Effect of process parameters and tool geometry on mechanics of chip formation, Measurement of cutting forces, effect of tool geometry. Mechanism of chip formation of surface roughness. Effect of cutting forces on product quality. Cutting temperature - Identification of heat sources in machining. Effect of cutting temperature on product quality and cutting tool. Estimation, measurement and control of cutting temperature. Effect of process parameters and tool geometry on cutting temperature.	5
5	**Tool Wear, Tool Life and Tool Material-** Different mechanism of tool wear. Types of tool wear (crater, flank etc), Measurement and control of tool wear, Concept of tool life, Taylor's tool life equation (including modified version). Different tool materials and applications including effect of tool coating. Machining Time- Estimation of machining time in different machining operations, Introduction to economics of machining, Revisit to the concept of machinability.	6
6	**Introduction to Grinding -** Need and different methods of grinding, Wheel specifications, Mechanics of grinding, Similarities and differences between grinding and machining. Basic Kinematic systems and operations of Other Machine Tools- Kinematic system and operations of drilling machines. Kinematic system and operations of milling machines. Construction, working principle and applications of shaping, planing and slotting.	6
SECTION - C		
7	**Precision and Accuracy-** Methods of estimating accuracy and precision; Needs for accuracy and precision; Standards and their evolution; Types of errors in measurements. Limits, Fits and Tolerances, & Gauge Design- Basic concepts in limits, fits and tolerances Tolerance grades; ISO system of tolerance, Principles gauge design. Work Shop and Inspection gauges.	5

SECTION - D		
8	**Screw Thread Measurement-** Standard thread profiles, Different Thread Elements, Effective diameter, 2 wire and 3 wire methods as applied to standard and non-standard thread profiles, Best wire size, Virtual Effective Diameter. Surface Roughness-Sources of surface irregularities in manufacturing, Different elements of surface roughness, Definition of center line and related roughness parameters, Measurement Instruments, Profilometers, Analysis of roughness signal in frequency domain	4
9	**Gear Metrology-** Different types of gears, Basic elements of a gear, Involute function, Relations between different gear elements of spur and helical gears, Virtual number of teeth, Use of gear tooth Vernier for chordal and constant chordal measurements, Span measurement using Base Tangent Micrometers. Coordinate Measuring Machines-Introduction to Coordinate Measuring Machines.	4

	SECTION - A	
1	**Introduction-**Definition of Quality, Quality function, Dimensions of Quality, Quality. Engineering terminology, Brief history of quality methodology, Statistical methods for quality improvement, Quality costs – four categories costs and hidden costs. Brief discussion on sporadic and chronic quality problems. Introduction to Quality function deployment.	6
2	**Quality** Assurance-Definition and concept of quality assurance, departmental assurance activities. Quality audit concept, audit approach etc. structuring the audit program, planning and performing audit activities, audit reporting, ingredients of a quality program.	6
	SECTION - B	
3	**Statistical Process Control-**Introduction to statistical process control – chance and assignable causes variation. Basic principles of control charts, choice of control limits, sample size and sampling frequency, rational subgroups. Analysis of patterns of control charts. Case Studies on application of SPC. Process capability – Basic definition, standardized formula, relation to product tolerance and six sigma concept of process capability, Seven QC tools	6
4	**Control Charts for Variables-** Controls charts for X bar and Range ®, statistical basis of the charts, development and use of X bat and R charts interpretation of charts. Control charts for X bar and standard deviation (S), development and use of X bat and S chart. Brief discussion on – Pre control X bar and S control charts with variable sample size, control charts for individual measurements, moving-range charts.	6

SECTION - C		
5	**Control Charts for Attributes-** Controls chart for fraction non- conforming (defectives) development and operation of control chart, brief discussion on variable sample size. Control chart for non-conformities (defects) – development and operation of control chart for constant sample size and variable sample size. Choice between variables and attributes control charts. Guidelines for implementing control charts. Sampling Inspection-Concept of accepting sampling, economics of inspection.	6
6	**Acceptance plans –** single, double and multiple sampling. Operating characteristic curves – construction and use. Determinations of average outgoing quality, average outgoing quality level, average total inspection, producer risk and consumer risk, published sampling plans, Gauge R and R and MSA. Statistical Theory of Tolerances-Application of statistical theory of tolerances to design of tolerances in random assemblies and application in other areas.	6
SECTION - D		
7	**Reliability and Life Testing-** Failure models of components, definition of reliability, MTBF, Failure rate, common failure rate curve, types of failure, reliability evaluation in simple cases of exponential failures in series, paralleled and series-parallel device configurations, Redundancy and improvement factors evaluations.	6

Course Name	**:**	**Simulation of Mechanical Systems**
Course Code	**:**	**MEL-464**
Credits (L-T-P)	**:**	**4 (4-0-0)**
Total Marks	**:**	**100**
Mid Semester Examination	**:**	**20% weightage**
End Semester Examination	**:**	**80% weightage**

Course Objectives:
The course objective is to make students understand the importance of use of probability and statistics in engineering along with systematic simulation and approach.

	SECTION – A	
1	**Introduction** - A review of basic probability and statistics, random variables and their properties, Estimation of means variances and correlation.	7
	SECTION – B	
2	**Physical Modeling -** Concept of System and environment, Continuous and discrete systems, Linear and nonlinear systems, Stochastic activities, Static and Dynamic models, Principles of modeling, Basic Simulation modeling, Role of simulation in model evaluation and studies, advantages of simulation	12
	SECTION – C	
3	**System Simulation and Approach -** Techniques of simulation, Monte Carlo method, Experimental nature of simulation, Numerical computation techniques, Continuous system models, Analog and Hybrid simulation, Feedback systems, Computers in simulation studies, Simulation software packages. System Dynamics: Growth and Decay models, Logistic curves, System dynamics diagrams. Probability Concepts in Simulation: Stochastic variables, discrete and continuous probability functions, Random numbers, Generation of Random numbers, Variance reduction techniques, Determination of length of simulation runs.	12

SECTION - D		
4	**Simulation of Mechanical Systems -** Building of Simulation models, Simulation of translational and rotational mechanical systems, Simulation of hydraulic systems. Simulation of Manufacturing Systems: Simulation of waiting line systems, Job shop with material handling and Flexible manufacturing systems, Simulation software for manufacturing, Case studies.	12

Course Objectives:
The object of *Project Work II & Dissertation* is to enable the student to extend further the investigative study taken up under *Project Work*, either fully theoretical/practical or involving both theoretical and practical work, under the guidance of a Supervisor from the Department alone or jointly with a Supervisor drawn from R&D laboratory/Industry. This is expected to provide a good training for the student(s) in R&D work and technical leadership.
