\* The students are required to study any three of the following Elective papers

MBL-582 Molecular Immunology  
 MBL-585 Environmental Biochemistry  
 MBL-586 Lipid Biochemistry  
 MBL-589 Molecular Genetics  
 MBL-590 Medical Biochemistry  
 MBL-591 Applied and Medical Microbiology  
 MBL-592 Molecular Cell Biology  
 MBL-593 Advanced Molecular Biology  
 MBL-595 SPORTS BIOCHEMISTRY

**\*\* Interdisciplinary courses 1, 2 and 3 will be selected from schemes of courses of other Science Departments as decided by the BOC.**

**NOTE:** PSL-053 ID Course Human Rights & Constitutional Duties (Compulsory Paper) Students can opt. this paper in any odd semester. This ID Paper is one of the total ID Papers of this course.

**Course No. MBL-401**

## **BIOMOLECULES**

<b>Credit hrs.</b>		
<b>L</b>	<b>T</b>	<b>P</b>
<b>4</b>	<b>0</b>	<b>0</b>

**Time: 3 Hours**

**Max. Marks: 100**

**Mid Semester Marks : 20**

**End Semester Marks : 80**

**Mid Semester Examination: 20% weightage**

**End Semester Examination: 80% weightage**

### **Instructions for the Paper Setters:**

Eight questions of equal marks (Specified in the syllabus) are to be set, two in each of the four Sections (A-D). Questions may be subdivided into parts (not exceeding four). Candidates are required to attempt five questions, selecting at least one question from each Section. The fifth question may be attempted from any Section.

### **Course Contents**

#### **Section-A**

##### **Introduction:**

Biological fitness of organic compounds, dimensions and shape of biomolecules, supramolecular assemblies and cell organelles. Structure of atoms, molecules and chemical bonds. **Carbohydrates:** Definition importance and functions, families of monosaccharides and structure of carbohydrates, stereoisomerism and mutarotation, derivatives of monosaccharides, disaccharides, trisaccharides and polysaccharides (starch, glycogen, cellulose, dextrins), sugars of bacterial cell wall.

#### **Section-B**

**Water:** Physical properties and structure of water, hydrogen bonding, solvent properties of water, ionization of water, fitness of aqueous environment for living organisms. **Lipids:** Definition, importance and functions, classification of lipids, fatty acids and essential fatty acids, general structure and functions of major lipid subclasses, acylglycerols, phosphoglycerides, sphingolipids, terpenes, steroids, eicosanoids.

#### **Section-C**

**Proteins:** Definition, importance and functions, amino acids as building blocks of proteins, essential amino acids, non-protein amino acids, structure of peptide bond, organizational levels of protein structure, relationship between primary and higher order structures, supramolecular assemblies of proteins, solubility, denaturation, functional diversity and species specificity of proteins, protein classification, chemical synthesis of polypeptides. Conformation of proteins: Ramachandran Plot, Secondary, tertiary and quaternary structure; domains; motif and folds. Stabilizing interactions: Vander waals, electrostatic, hydrogen bonding, Hydrophobic interactions. Stability of protein structure.

#### **Section-D**

**Vitamins and Minerals:** Definition, chemistry and functions of water and fat soluble vitamins, major trace minerals, their bound forms and functions. **Porphyrins:** Nucleus and classification of porphyrins, important metallo porphyrins occurring in nature, chemical nature and physiological significance of bile pigment.

**Books Recommended**

1. Nelson DL and Cox MM. (2013) Lehninger Principles of Biochemistry, 6<sup>th</sup> Edition. Macmillan Worth Publishers, New Delhi.
2. Berg JM, Tymoczko JL, Gatto GJ and Stryer L (2015) Biochemistry, 8th Edition, WH Freeman & Co., New York.
3. Bender DA, Botham KM, Kennelly PJ, Rodwell VW and Weil PA (2015) Harper's Illustrated Biochemistry, 30th Edition, McGraw-Hill Medical Canada.
4. Voet D, Voet JG and Pratt CW (2015). Fundamentals of Biochemistry, 4<sup>th</sup> Edition. John Wiley & Sons. New York.

Course No. MBL-402

## ENZYMOLOGY

Credit hrs.		
L	T	P
4	0	0

Time: 3 Hours

Max. Marks: 100

Mid Semester Marks : 20

End Semester Marks : 80

Mid Semester Examination: 20% weightage

End Semester Examination: 80% weightage

### Instructions for the Paper Setters:

Eight questions of equal marks (Specified in the syllabus) are to be set, two in each of the four Sections (A-D). Questions may be subdivided into parts (not exceeding four). Candidates are required to attempt five questions, selecting at least one question from each Section. The fifth question may be attempted from any Section.

### Course Contents

#### Section-A

**Introduction to Enzymes:** Nomenclature, Classification and Characteristics of enzymes, Enzyme specificity, Cofactors, Co-enzyme and Prosthetic group. **Mechanism of Enzyme Action:** Nature of active site, identification of functional groups at active site, enzyme substrate complex, Factors responsible for catalytic efficiency of enzymes: Proximity and orientation, covalent catalysis, Acid base catalysis, Strain and distortion theory, Induced fit hypothesis.

#### Section-B

**Mechanism of action of selected enzymes:** Chymotrypsin, Lysozyme, Carbonic anhydrase, Ribonuclease, Involvement of co-enzymes in enzyme catalyzed reactions, RNA molecules as enzymes. **Enzyme Kinetics:** A brief concept of bioenergetics and kinetics, Kinetics of single and bi-substrate enzyme catalyzed reactions, MichaelisMenten equation. Derivation of MichaelisMenten equation and determination of  $K_m$  and  $V_{max}$  values

#### Section-C

**Enzyme inhibition:** reversible and irreversible inhibition, Kinetics of competitive, uncompetitive and non-competitive inhibition, Random, Ordered, Theorell & Chance, and Ping-pong mechanism, their rate equations and diagnostic plots, Substrate inhibition and activation, Effect of pH and temperature on rate of enzyme catalyzed reactions. **Regulation of Enzyme Activity:** Allosteric enzymes, control of metabolic pathways, Mechanism of Aspartate transcarbamylase, Sigmoidal behavior, sequential and concerted models, Reversible covalent modification and zymogen activation, Isozymes and their importance

#### Section-D

**Enzyme Technology:** Extraction and purification of enzymes, Enzymes as analytical reagents, Immobilized enzymes, Biotechnological applications of enzymes, Application of enzymes in medicine and industry.

**Books Recommended:**

1. Berg JM, Tymoczko JL, Gatto GJ and Stryer L (2015) Biochemistry, 8th Edition, WH Freeman & Co., New York.
2. Nelson DL and Cox MM. (2013) Lehninger Principles of Biochemistry, 6<sup>th</sup> Edition. Macmillan Worth Publishers, New Delhi.
3. Palmer T and Bonner PL (2007) Enzymes: Biochemistry, Biotechnology and Clinical Chemistry, 2<sup>nd</sup> Edition, Woodhead Publishing.
4. Voet D, Voet JG and Pratt CW (2011). Fundamentals of Biochemistry, 5<sup>th</sup> Edition. John Wiley & Sons. New York.

M.Sc. Molecular Biology & Bio Chemistry (Semester-I)  
(Credit Based Evaluation & Grading System)

**Course No. MBL-403**

**FUNDAMENTALS OF MOLECULAR BIOLOGY**

Credit hrs.		
L	T	P
4	0	0

**Time: 3 Hours**

**Max. Marks: 100**

**Mid Semester Marks : 20**

**End Semester Marks : 80**

**Mid Semester Examination: 20% weightage**

**End Semester Examination: 80% weightage**

**Instructions for the Paper Setters:**

Eight questions of equal marks (Specified in the syllabus) are to be set, two in each of the four Sections (A-D). Questions may be subdivided into parts (not exceeding four). Candidates are required to attempt five questions, selecting at least one question from each Section. The fifth question may be attempted from any Section.

**Course Contents**

**Section-A**

**Structure and Functions of Nucleic Acids:** The beginning of Molecular Biology; DNA: A carrier of genetic information, Chemical structure of DNA and Base composition, biologically important nucleotides, Watson-Crick model, Supercoiled DNA, structure of different types of nucleic acids, hydrolysis of nucleic acids. Conformation of nucleic acids: A-, B-, Z-, DNA, t-RNA, micro-RNA. Stability of nucleic acid structure

**Section-B**

**DNA replication, repair and recombination:** Unit of replication, enzymes involved, replication origin and replication fork, fidelity of replication, extrachromosomal replicons, DNA damage and repair mechanisms.

**Section-C**

**RNA synthesis and processing:** Structure and function of RNA polymerases. Transportation in prokaryotes Transcription factors and machinery, formation of initiation complex, transcription activators and repressors, RNA polymerases, capping, elongation and termination, RNA processing, RNA editing, splicing, polyadenylation, structure and function of different types of RNA, RNA transport.

**Section-D**

**Protein synthesis and processing:** Ribosome, formation of initiation complex, initiation factors and their regulation, elongation and elongation factors, termination, genetic code, aminoacylation of tRNA, tRNA-identity, aminoacyl tRNA synthetase, translational proof-reading, translational inhibitors, post- translational modification of proteins.

M.Sc. Molecular Biology & Bio Chemistry (Semester-I)  
(Credit Based Evaluation & Grading System)

**Books Recommended:**

1. George M Malanciski (2008). Freifelder's Essentials of Molecular Biology, 4th edition. Narosa Publishing House, India.
2. Berg JM, Tymoczko JL, Gatto GJ and Stryer L (2015) Biochemistry, 8th Edition, WH Freeman & Co., New York.
3. Allison A. Lizabeth (2012) Fundamental Molecular Biology, 2nd Edition. J Willey and Sons, Hoboken, New Jersey.
4. Freifelder D and Malacinski GM (2010) Essentials of Molecular Biology, 4th Edition, John and Bartlett Publishing, UK
5. Krebs JE., Kilpatrick ST. and Goldstein ES. (2013). Lewin' GENES XI, Jones & Bartlett Learning. Burlington, MA.
6. Alberts B., Johnson A., Lewis J., Mofgan D., Raff M., Roberts K and Walter P. (2014). Molecular Biology of the Cell. 6<sup>th</sup> Edition. Garland Science.

**MTL-261-BIOSTATISTICS**

Credit hrs.		
L	T	P
3	1	0

**Time: 3 Hours**

**Max. Marks: 100**  
**Mid Semester Marks : 20**  
**End Semester Marks : 80**

**Mid Semester Examination: 20% weightage**  
**End Semester Examination: 80% weightage**

**Instructions for the Paper Setters:**

Eight questions of equal marks (Specified in the syllabus) are to be set, two in each of the four Sections (A-D). Questions may be subdivided into parts (not exceeding four). Candidates are required to attempt five questions, selecting at least one question from each Section. The fifth question may be attempted from any Section.

**Note:-** The scope of this paper is restricted only to the applications of various statistical techniques. The mathematical derivations of various results are excluded.

**Section-A**

**Statistical Methods** — Collection of data, Frequency distribution and, Measures of Central Tendency, Dispersion.

**Correlation and Regression** — Relationship between variables, Covariance, Karl-Pearson's Correlation Coefficient, Spearman's rank Correlation Coefficient, Least square technique for regression lines (without proof), Regression Coefficients, Relationship between Correlation analysis and Regression Analysis.

**Section-B**

**Probability** — Mathematical definition of probability of an event, Use of permutations and combinations in calculations of Probability, Conditional probability, Additive and Multiplication law of Probability, Random Variables and its pmf, pdf, cdf, Mathematical expectation and variances, Theoretical Distributions: Binomial, Poisson and normal, Properties of these distributions (applications only).

**Section-C**

**Hypothesis Testing** — Sample, Population, Statistics and Parameters, Null Hypothesis, Level of significance, Definitions of Chi-square, 't' and 'F' variates and their pdfs only, Applications of these distributions in testing of hypothesis.

**Section-D**

**Large sample test-** Testing of significance of proportion in single population, Testing of equality of proportions in two populations, Testing of significance of mean in single population, Testing of equality of means in two populations.

**Analysis of Variance** — Meaning of analysis variance with linear models, Analysis of variance for one-way classified data, Analysis of variance for two-way classified data with one observation for cell.

**Mid Semester Marks : 20**  
**End Semester Marks : 80**

**Mid Semester Examination: 20% weightage**  
**End Semester Examination: 80% weightage**

**Instructions for the Paper Setters:**

Eight questions of equal marks (Specified in the syllabus) are to be set, two in each of the four Sections (A-D). Questions may be subdivided into parts (not exceeding four). Candidates are required to attempt five questions, selecting at least one question from each Section. The fifth question may be attempted from any Section.

**Section-A**

Computer fundamentals, Internet basics and MS-Office 2003, Introduction to digital computers, Organization, Number system, I/O devices, Storage devices, Introduction to internet and its applications – www, email, ftp. MS-Windows basics, MS-Word – Meaning of Word-Processing, Creating, Saving, Printing documents, Formatting, Spell-Check, Adding page numbers, Header and Footer, Macros, Creating tables, Converting table to text and vice-versa, Mail Merge.

**Section-B**

MS-Excel – Spreadsheets, Using different types of formulae, Creating graphs and charts, Exporting charts to MS-Word, MS-PowerPoint – Creating presentations, Formatting, Adding effects and timings. Types of errors and level of significance, Tests of significance (F and t-test), Chi-square tests.

**Section-C**

Data analysis and database – Brief description and tabulation of data, Measure of central tendency and dispersion – Mean, Median, Mode, Range, Standard Deviation, Variance and Correlation coefficient using SPSS. Introduction to Data, Information, Database, DBMS (Advantages and disadvantages), Introduction to SQL (Data retrieval).

**Section-D**

Virtual library and some useful sites on Internet – Searching MEDLINE on the Pubmed system from National Centre for Biotechnology and Information. Assessing full text journals on the internet and printing articles using EndNote.

**Books Recommended:**

1. Sinha, P.K. (1992). Computer Fundamentals.
2. Peter Norton's Introduction to Computers, 6<sup>th</sup> ed.
3. Windows Based Computer Courses, Sumit Kumar, JBD Publishers.
4. Gupta, S.C. (2004). Fundamentals of Statistics. Himalaya Publishing House.

**Course No. MBP-422****PRACTICALS IN BASIC AND CLINICAL BIOCHEMISTRY**

Credit hrs.		
L	T	P
0	0	6

Preparation of buffer solutions, determination of pKa, pI and Measurement of absorption maxima. Demonstration of Beer-Lambert Law and study of its validation, Estimation of total and reducing sugars by spectroscopic methods, Isolation of glycogen, Acidic and enzymatic hydrolysis of polysaccharides, Measurement of optical rotation, Demonstration of phenomenon of inversion, Absorption maxima of aromatic amino acids, Estimation of protein by Biuret, Bradford, Lowry and UV methods. Demonstration of protein purification techniques. Paper chromatography of lipids and their characterization as saponification number, acid value and iodine number, Quantitative estimation of Vitamin C. Factors affecting enzyme activity, Vmax and Km Value. Enzyme activity studies, assay of enzymes of clinical importance like amylase, phosphatases and aminotransferases. Estimation of Hb, serum cholesterol, creatine, uric acid, urea, triacylglycerides, HDL, LDL, bilirubin, blood sugar and serum electrolytes (Na<sup>+</sup>, K<sup>+</sup> and chloride) urine analysis for abnormal constituents.

**Books Recommended:**

1. Plummer D (2006) An Introduction to Practical Biochemistry, Tata McGraw Hill Publishing Co., New Delhi.
2. Wilson K and Walker J (2010) Principles and Techniques of Practical Biochemistry, Cambridge University Press, UK
3. Boye R (2006) Modern Experimental Biochemistry, Pearson Education, Asia, New Delhi

### CONCEPTS IN IMMUNOLOGY

Credit hrs.		
L	T	P
4	0	0

Time: 3 Hours

Max. Marks: 100

Mid Semester Marks : 20

End Semester Marks : 80

Mid Semester Examination: 20% weightage

End Semester Examination: 80% weightage

#### Instructions for the Paper Setters:

Eight questions of equal marks (Specified in the syllabus) are to be set, two in each of the four Sections (A-D). Questions may be subdivided into parts (not exceeding four). Candidates are required to attempt five questions, selecting at least one question from each Section. The fifth question may be attempted from any Section.

#### Course Contents

##### Section-A

**Introduction:** Types of immunity, innate and adaptive immune system, Features of immune response: memory, specificity and recognition of self and non-self, terminology and approaches to the study of immune system.

**Cells and Organs of the Immune System:** Cells and molecules involved in innate and adaptive immunity, Toll-like receptors, Lymphoid cells, heterogeneity of lymphoid cells, T-cells, B-cells, Null cells, Monocytes, Polymorphs, Primary and secondary lymphoid organs- Thymus, Bursa of fabricius, spleen, lymph nodes, lymphatic system, mucosa associated lymphoid tissue (MALT), lymphocyte traffic, Activation of B and T cells and their differentiation.

##### Section-B

#### Humoral Immunity:

Antigen-antibody interactions, primary and secondary immune modulation. Affinity and avidity, high and low affinity antibodies, immunoglobulins, classes and structure, complement fixing antibodies and complement cascade.

#### Cell Mediated Immunity:

T-cell subsets and surface markers, T-dependent and T-independent antigens, recognition of antigens by T-cells and role of MHC in antigen processing and presentation, structure of T-cell antigen receptors, TCR, BCR, cell mediated effector functions.

##### Section-C

#### Immunological Disorders:

Inflammation, Types of hypersensitivity reactions, autoimmune disorders, their underlying molecular mechanism, etiology, diagnostic, prognostic and prophylactic aspects, immunodeficiency disorders: congenital and acquired, AIDS, immune response during bacterial (tuberculosis), parasitic (malaria), and viral (HIV) infections.

### Section-D

**Immunodiagnostic Procedures:** Antibody generation, detection of molecules using ELISA, RIA, western blot, immunoprecipitation, flowcytometry and immunofluorescence microscopy, detection of molecules in living cells, in situ localization by techniques such as FISH and GISH. Various types of immunodiffusion and immunoelectrophoretic procedure, Immunoblot, agglutination of pathogenic bacteria, hemeagglutination and hemeagglutination inhibition, cellular techniques.

### Books Recommended

1. Kindt TJ, Osborne BA and Goldsby RA (2007) Immunology, 6<sup>th</sup> Edition, WH Freeman and Company, NY.
2. Owen JA, Punt J and Stranford SA (2013) Kuby Immunology, 7<sup>th</sup> Edition, WH Freeman and Company, NY.
3. Male D., Brostoff J., Roitt I and Roth D (2012) Immunology, WB Saunders Co. USA.
4. Parham P (2012). The Immune System, 3rd Edition, Garland Sciences, London and New York.

**End Semester Examination: 80% weightage**

**Instructions for the Paper Setters:**

Eight questions of equal marks (Specified in the syllabus) are to be set, two in each of the four Sections (A-D). Questions may be subdivided into parts (not exceeding four). Candidates are required to attempt five questions, selecting at least one question from each Section. The fifth question may be attempted from any Section.

**Course Contents**

**Section-A**

**Introduction to Metabolism:** Types of Metabolic Pathways, Experimental approaches to study metabolism, Basic principles/mechanisms of metabolic regulation. Basic concepts and design of metabolism. Some activated carriers in metabolism. Basic principles of bioenergetics: chemical basis of large free energy of hydrolysis of some energetic compounds; coupled reactions; group transfer; biological energy transducers. Types of biological oxidation-reduction reactions.

**Section-B**

**Carbohydrate Catabolism:** Digestion and absorption of carbohydrates, glycolysis, citric acid cycle, oxidative phosphorylation, pentose phosphate and other pathways, Degradation of di and polysaccharides.

**Section-C**

**Carbohydrate Anabolism:** Gluconeogenesis, Role of nucleotide diphosphate sugars, Biosynthesis of disaccharides and polysaccharides, Regulation of carbohydrate metabolism, photosynthesis.

**Section-D**

**Lipid Catabolism:** Digestion and absorption of lipids, transport of lipoproteins, Oxidation of fatty acids, Degradation of triacylglycerols, phosphoglycerides. Sphingolipids, Regulation of lipid Metabolism. **Lipid Anabolism:** synthesis of fatty acids, triacylglycerols, phosphoglycerides, sphingolipids, cholesterol, prostaglandins and other protanoids,

**Books Recommended:**

1. Berg JM, Tymoczko JL, Gatto GJ and Stryer L (2015) Biochemistry, 8th Edition, WH Freeman & Co., New York.
2. Bender DA, Botham KM, Kennelly PJ, Rodwell VW and Weil PA (2015) Harper's Illustrated Biochemistry, 30th Edition, McGraw-Hill Medical Canada.

## RECOMBINANT DNA TECHNOLOGY

Credit hrs.		
L	T	P
4	0	0

Time: 3 Hours

Max. Marks: 100

Mid Semester Marks : 20

End Semester Marks : 80

Mid Semester Examination: 20% weightage

End Semester Examination: 80% weightage

### Instructions for the Paper Setters:

Eight questions of equal marks (Specified in the syllabus) are to be set, two in each of the four Sections (A-D). Questions may be subdivided into parts (not exceeding four). Candidates are required to attempt five questions, selecting at least one question from each Section. The fifth question may be attempted from any Section.

### Course Contents

#### Section-A

**Tools of Genetic Engineering:** Enzymes used in recombinant DNA technology: restriction endonucleases & other DNA modifying enzymes, plasmid, bacteriophage and cosmids, BAC, YAC and yeast based vectors as vehicles of cloning, expression vectors.

#### Section-B

**Cloning strategies:** Cloning from mRNA & genomic DNA, gene libraries. **Selection of Recombinants:** Selection, screening and analysis of recombinants by genetic, immunological and nucleic acid hybridization methods. **Expression of recombinant DNA molecules:** Expression in bacterial, yeast, insect and mammalian cells.

#### Section-C

**Basic Techniques:** Isolation Handling and quantification of Nucleic acids, DNA (genomic & plasmid) & RNA agarose gel electrophoresis, pulse field gel electrophoresis. Preparation of labeled DNA probes, Southern blotting. Northern blotting, DNA sequencing – Maxam Gilbert & Sanger Methods. DNA finger printing (RFLP, RAPD, AFLP), Polymerase chain reaction, site directed mutagenesis, Transformation, Transfection & generation of deletions, gene knock out.

#### Section-D

**Applications of Recombinant DNA Technology:** In Medicine: Molecular diagnostics, vaccines, drugs, gene therapy. In Agriculture: Transgenic plants, insecticide, herbicide resistant plants and antisense technology. **In Industry:** Commercially available recombinant products, transgenic animals.

**Course No. MBP-471****PRACTICALS IN MOLECULAR BIOLOGY**

Credit hrs.		
L	T	P
0	0	6

Isolation of genomic DNA from human blood, Quantification of DNA using spectrophotometric method, Isolation of plasmid DNA from bacteria, ethanol precipitation of DNA, Digestion of DNA using restriction endonucleases, Resolution and molecular weight estimation of fragmented DNA using agarose gel electrophoresis, Construction of restriction map by single and double digestion, Ligation of DNA fragments, Preparation of competent cells using CaCl<sub>2</sub> method, Transformation of bacteria, Designing primers for PCR, Purification of a DNA fragment by agarose gel, RNA isolation, cDNA synthesis, protocol for quantitative PCR.

**Books Recommended:**

1. Ausbel FM, Brent R, Kingston RE, Moore DD, Sediman JG, Smith JA, Sruhi V (1989) Current Protocols in Molecular Biology, Greene Publishing and Wiley Interscience, NY
2. Sambrook Joseph and Russell DW (2012) Molecular Cloning: A Laboratory Manual, Cold Spring Harbor Laboratory Press, NY

Course No. MBL-502

**METABOLISM OF PROTEINS AND NUCLEIC ACIDS**

Credit hrs.		
L	T	P
4	0	0

**Time: 3 Hours**

**Max. Marks: 100**

**Mid Semester Marks : 20**

**End Semester Marks : 80**

**Mid Semester Examination: 20% weightage**

**End Semester Examination: 80% weightage**

**Instructions for the Paper Setters:**

Eight questions of equal marks (Specified in the syllabus) are to be set, two in each of the four Sections (A-D). Questions may be subdivided into parts (not exceeding four). Candidates are required to attempt five questions, selecting at least one question from each Section. The fifth question may be attempted from any Section.

**Course Contents**

**Section-A**

**Metabolism of Nitrogen:** Digestion and absorption of proteins, Nitrogen fixation and its mechanism, Assimilation of ammonia, Nitrogen cycle. **Catabolism of Amino Acids:** General reactions of amino acids metabolism i.e. transamination, deamination, decarboxylation, Urea cycle, Catabolism of individual amino acids.

**Section-B**

**Anabolism of amino acids:** Biosynthesis of essential and non-essential amino acids, Regulation of amino acid biosynthesis, **Metabolism of amino acids precursors:** Metabolism of Porphyrins: Biomedical importance, Heme biosynthesis, Genetic disorders of heme metabolism, catabolism of heme bilirubin: its conjugation and secretion, hyperbilirubinaemia.

**Section-C**

**Degradation of Nucleotides:** Degradation of purines and pyrimidines, Salvage pathways, **Biosynthesis of Nucleotides:** Biosynthesis of purine and pyrimidine nucleotides, Biosynthesis of deoxyribonucleotides, Biosynthesis of nucleotide coenzymes, Regulation of nucleotide biosynthesis.

**Section-D**

**Integration of Metabolism:** Recurring motifs in biochemistry, regulation of major metabolic pathways, metabolic fates of glucose-6-phosphate, pyruvate and acetyl CoA, Metabolic profiles of brain, muscle, adipose tissue, liver and kidney, Hormonal regulation of metabolism, metabolic adaptations.

**Books Recommended:**

1. Berg JM, Tymoczko, JL, Gatto Jr GJ and Stryer L (2015) Biochemistry, 8th Edition, WH Freeman & Co., New York.
2. Rodwell V, Weil PA, Botham KM, Bender D and Kennelly PJ (2015) Harper's Illustrated Biochemistry, 30<sup>th</sup> Edition, McGraw-Hill Medical.
3. Nelson DL and Cox MM. (2013) Lehninger Principles of Biochemistry, 6<sup>th</sup> Edition. Macmillan Worth Publishers, New Delhi.

### MBL-503 BIOPHYSICAL & BIOCHEMICAL TECHNIQUES

Credit hrs.		
L	T	P
3	1	0

**Time: 3 Hours**

**Max. Marks: 100**

**Mid Semester Marks : 20**

**End Semester Marks : 80**

**Mid Semester Examination: 20% weightage**

**End Semester Examination: 80% weightage**

#### Instructions for the Paper Setters:

Eight questions of equal marks (Specified in the syllabus) are to be set, two in each of the four Sections (A-D). Questions may be subdivided into parts (not exceeding four). Candidates are required to attempt five questions, selecting at least one question from each Section. The fifth question may be attempted from any Section.

#### Course Contents

##### Section-A

**Basic techniques:** Preparation of solutions & buffers, Methods of cell disintegration; Enzyme assays and controls. **Protein purification techniques:** Dialysis, Ultrafiltration and precipitation, Chromatography: Principles of chromatography, TLC and Paper chromatography; Gel permeation, Ion exchange, Hydrophobic, Reverse-phase and Affinity chromatography; HPLC and FPLC; Criteria of protein purity.

##### Section-B

**Centrifugation:** Basic principles: sedimentation of macromolecules, sedimentation velocity, sedimentation equilibrium and density gradient sedimentation, rpm & RCF. Types of centrifuge & rotors - Microcentrifuge, High speed & Ultracentrifuges; Preparative centrifugation; Differential & density gradient centrifugation; Applications (Isolation of cell components); Analytical centrifugation. Determination of molecular weight by sedimentation velocity & sedimentation equilibrium methods. **Transport in Electric Field:** Factors affecting migration rate, types of electrophoresis. Theory and application of Polyacrylamide and Agarose gel electrophoresis; Capillary electrophoresis; 2D Electrophoresis; Disc gel electrophoresis; Gradient electrophoresis; Pulsed field gel electrophoresis.

##### Section-C

**Spectroscopic Techniques:** Analysis of biomolecules using UV/visible, fluorescence, circular dichroism, NMR and ESR spectroscopy, structure determination using X-ray diffraction and NMR; analysis using light scattering, different types of mass spectrometry and surface plasma resonance methods.

##### Section-D

**Structure determination of macromolecules:** Fundamentals of X-Ray Analysis, NMR & cryo EM. **Radiolabeling techniques:** Properties of different types of radioisotopes normally used in biology, their detection and measurement; incorporation of radioisotopes in biological tissues and cells, molecular imaging of radioactive material, safety guidelines.

**Books Recommended:**

1. Friefelder, D. (1999). Physical Biochemistry - Application of Biochemistry and Molecular Biology, 2<sup>nd</sup> Edition, W.H.Freeman and Co.
2. Wilson K and Walker J (2011). Principles and Techniques of Practical Biochemistry. 5<sup>th</sup> edition. Cambridge Univ. Press.
3. Terrance G Cooper (1977). The Tools of Biochemistry. Wiley-Interscience Publication.
4. Gale Rhodes (2012). Crystallography Made Crystal Clear. 3<sup>rd</sup> Edition, Academic Press.

**Course No. MBP-522**

**PRACTICALS IN IMMUNOLOGY AND MICROBIOLOGY**

Credit hrs.		
L	T	P
0	0	6

**Immunology**

Separation of Immune cells; Identification and viability test by dye exclusion method; Techniques of immunization and use of adjuvants; Separation of hyperimmune serum and purification of antibodies; Detection of antibodies by various techniques; Complement fixation, Blood grouping. Hemagglutination assays; ELISA: Dot/Antigen/antibody capture/sandwich; Immunoprecipitation techniques: Ouchterlony double diffusion, Immunoelectrophoresis, Western blotting.

**Microbiology**

Preparation of solid media and liquid media, pour plating, streaking plate method, serial dilution, CFU count, staining techniques like simple staining, Gram's Staining, Differential staining, Motility test, Hanging drop, Bacterial transformation, plasmid isolation and purification, restriction digestion.

**Books Recommended:**

- 1 Hudson H and Hay FC (1976) Practical Immunology, 1st Edition, Blackwell Scientific Publications, Oxford.
- 2 Talwar GP (1983) A Handbook of Practical Immunology, Vikas Publication House Pvt Ltd, New Delhi.
- 3 Wair DM (1978) Handbook of Experimental Immunology, 3rd Edition, Blackwell Scientific Publications, Oxford.

Genomics and Proteomics

Credit hrs.		
L	T	P
4	0	0

Time: 3 Hours

Max. Marks: 100

Mid Semester Marks : 20

End Semester Marks : 80

Mid Semester Examination: 20% weightage

End Semester Examination: 80% weightage

**Instructions for the Paper Setters:**

Eight questions of equal marks (Specified in the syllabus) are to be set, two in each of the four Sections (A-D). Questions may be subdivided into parts (not exceeding four). Candidates are required to attempt five questions, selecting at least one question from each Section. The fifth question may be attempted from any Section.

**Section-A**

**Human Genome structure:** Physical structure and genetic content of Human genome, Nature of genetic variations: Single nucleotide polymorphism, Large scale variations, conserved and variable domains, Methods for studying variation: RFLPs, VNTR and minisatellites, SSCP and direct Sequencing. Genetic and physical maps of human genome: chromosome maps and markers, clone libraries and Expressed sequence Tag. Locating genes in DNA sequence

**Section-B**

**Gene expression and microarray:** Determination of gene function, Role of genetic footprinting in assigning function of a gene, Patterns of gene expression. DNA Chips and Microarray: Chemical DNA synthesis, Printing of oligonucleotides Genome analysis for global patterns of gene expression using fluorescent labeled cDNA or end-labelled RNA probes, Analysis of single nucleotide polymorphism using DNA chips, Advantages and Disadvantages of DNA microarray.

**Section-C**

**Proteomics:** Introduction to proteomics, Techniques in proteomic research: Two dimensional separations of total cellular proteins, isolation and sequence analysis of individual protein spots by mass spectroscopy,

**Section-D**

**Protein array:** Protein microarrays, Advantages and disadvantages of protein microarrays, Total expression vs functional proteomics, Application of proteomics. Oligosaccharide microarrays for glycomics, Pharmacogenomics, Introduction of metabolomics

**Books Recommended:**

1. Supratim Choudhuri, David B. Carlson. (2008) Genomics: Fundamentals and Applications. CRC Press.
2. Arthur M. Lesk. (2012) Introduction to Genomics Paperback 2<sup>nd</sup> Edition Oxford University Press.

## MOLECULAR IMMUNOLOGY

Credit hrs.		
L	T	P
4	0	0

Time: 3 Hours

Max. Marks: 100

Mid Semester Marks : 20

End Semester Marks : 80

Mid Semester Examination: 20% weightage

End Semester Examination: 80% weightage

### Instructions for the Paper Setters:

Eight questions of equal marks (Specified in the syllabus) are to be set, two in each of the four Sections (A-D). Questions may be subdivided into parts (not exceeding four). Candidates are required to attempt five questions, selecting at least one question from each Section. The fifth question may be attempted from any Section.

### Section-A

**Introduction:** An over view of the immune system, tools to study the immune system: Inbred strains, adoptive transfer systems, SCID Mice, ScID-Human Mice, primary lymphoid cultures, colonized lymphoid cell lines, hybrid lymphoid cell lines. **Antigens :** Antigenicity, immunogenicity, Antigenic determinants/epitopes, properties of B-Cell epitopes, properties of T-Cell epitopes, MHC-class-II-restricted antigens, mitogens, super antigens, vaccines.

### Section-B

**Antibodies:** Structure and functions including molecular structure of antibodies; Immunoglobulin domains; Immunoglobulin fold; variable region domains; complementarity determining regions (CDRs), CDRs and antigen binding, hinge region. Engineered Monoclonal antibodies, antibody engineering and their clinical applications. **Antibody Diversity:** Models of antibody diversity, multigene organization of Ig genes;  $\lambda$ -chain multigene family, K-chain multigene family, Heavy chain multigene family, V-J rearrangements in light chain DNA, V-D-J rearrangement in heavy chain DNA, mechanisms of variable region DNA rearrangement; recombination signal sequences, Enzymatic joining of gene segments and role of RAG-1 and rag -2 genes; Molecular Mechanism of class switching

### Section-C

**Molecular Organization of MHC:** MHC molecules: MHC class-I, class-II and class-III genes in mouse and man, concept of MHC haplotypes. MHC molecules and genes; Organization of Class-I and class-II molecules; class-I MHC-peptide interaction; Class II MHC-peptide interaction; polymorphism of class I and class II molecules; class III molecules including heat shock proteins, MHC and infectious diseases. **T-Cell Receptor:**

TCR for MHC-associated peptide antigen, structure of and T-cell receptor CD3-TCR, Accessory molecules of T-cells, CD-28 and CTLA-4 as T-cell receptors for co-stimulators, integrins selections.

### Section-D

**Signal Transduction and TCR-Complex:** TCR clustering, recruitment and activation of protein tyrosine kinases and adapter proteins, Ras and Rac, calcineurin and protein kinase C signaling pathways in T-cell, transcription factors regulating gene expression, Costimulators and transduction pathways.

**Signal Transduction and B-cell Receptor Complex:** Structure of B-cell receptor complex, recognition of antigen by B-cell receptor and signal transduction, complement receptors and second signal for B-cell, Antibody response to T-dependent and T-independent antigens.

#### Books Recommended:

1. Owen JA, Punt J and Stranford SA (2013) Kuby Immunology, 7<sup>th</sup> Edition, WH Freeman and Company, NY.
2. Abbas AK, Lichtman AH, Pillai S (2015) Cellular and Molecular Immunology. 8<sup>th</sup> Edition WB Saunders Co. USA.
3. Parham P (2012) The Immune System, 3<sup>rd</sup> Edition, Garland Sciences, London and New York.

(Credit Based Evaluation & Grading System)

Course No. MBL-585

Environmental Biochemistry

Credit hrs.		
L	T	P
4	0	0

Time: 3 Hours

Max. Marks: 100

Mid Semester Marks : 20

End Semester Marks : 80

Mid Semester Examination: 20% weightage

End Semester Examination: 80% weightage

**Instructions for the Paper Setters:**

Eight questions of equal marks (Specified in the syllabus) are to be set, two in each of the four Sections (A-D). Questions may be subdivided into parts (not exceeding four). Candidates are required to attempt five questions, selecting at least one question from each Section. The fifth question may be attempted from any Section.

**Section-A**

**The Environment:** Physical environment; biotic environment; biotic and abiotic interactions.

**Habitat and niche:** Concept of habitat and niche; niche width and overlap; fundamental and realized niche; resource partitioning; character displacement.

**Population ecology:** Characteristics of a population; population growth curves; population regulation; life history strategies (r and K selection); concept of metapopulation – demes and dispersal, interdemec extinctions, age structured populations.

**Section-B**

**Species interactions:** Types of interactions, interspecific competition, herbivory, carnivory, pollination, symbiosis.

**Community ecology:** Nature of communities; community structure and attributes; levels of species diversity and its measurement; edges and ecotones.

**Section-C**

**Ecological succession:** Types; mechanisms; changes involved in succession; concept of climax. **Ecosystem:** Structure and function; energy flow and mineral cycling (CNP); primary production and decomposition; structure and function of some Indian ecosystems: terrestrial (forest, grassland) and aquatic (fresh water, marine, eustarine).

**Biogeography:** Major terrestrial biomes; theory of island biogeography; biogeographical zones of India.

### Section-D

**Applied ecology:** Environmental pollution; global environmental change; biodiversity-status, monitoring and documentation; major drivers of biodiversity change; biodiversity management approaches.

**Conservation biology:** Principles of conservation, major approaches to management, Indian case studies on conservation/management strategy (Project Tiger, Biosphere reserves).

**Books recommended:**

1. Harrison, R.M. and de Mora, S.J. (1996). Introductory chemistry for the environmental sciences.
2. O'Neill, P. (1998) Environmental chemistry. Chapman and Hall, India.

Lipid Biochemistry

Credit hrs.		
L	T	P
4	0	0

Time: 3 Hours

Max. Marks: 100

Mid Semester Marks : 20

End Semester Marks : 80

Mid Semester Examination: 20% weightage

End Semester Examination: 80% weightage

**Instructions for the Paper Setters:**

Eight questions of equal marks (Specified in the syllabus) are to be set, two in each of the four Sections (A-D). Questions may be subdivided into parts (not exceeding four). Candidates are required to attempt five questions, selecting at least one question from each Section. The fifth question may be attempted from any Section.

**Section-A**

**Introduction:** Nature of lipids; Medical and biological importance of lipids, an overview of structure and function of lipids and lipoproteins.

**Metabolism of Lipids:** Digestion and absorption of lipids, transportation of lipids, role of apolipoproteins in lipid transport.

**Section-B**

**Lipids of Cellular Structure:** Structure of membrane lipids; phosphoglycerides, sphingolipids, glycolipids, gangliosides and sterols, biosynthesis of structural lipids, function of structural lipids.

**Section-C**

**Dietary Lipids**

Role of dietary lipids, assimilation of lipid by body; lipids in growth and development, disorders in lipids metabolism.

**Lipid Function:** Lipids as hormones and vitamins, structure and functions of eicosanoids, role of membrane lipids in adaptations, role of dolichol in glycosylation, lipids and membrane fusion, liposomes and drug delivery systems, role of lipids in signal transductions, immunity, lipids and skin diseases, lipid storage diseases.

**Section-D**

**Techniques to Study Lipid Biochemistry:** Extraction of lipids from natural samples, chromatographic techniques for purification and characterization of lipids.

**Books Recommended:**

1. Gurr, M.I, Harwood, J.L and Frayn, K.N. (2002): Lipid Biochemistry. Blackwell Science.
2. Vance, D. E and Vance, J.E. (Eds) (2008): Biochemistry of lipids, lipoproteins and membranes. 5<sup>th</sup> edition, Elsevier.

### Instructions for the Paper Setters:

Eight questions of equal marks (Specified in the syllabus) are to be set, two in each of the four Sections (A-D). Questions may be subdivided into parts (not exceeding four). Candidates are required to attempt five questions, selecting at least one question from each Section. The fifth question may be attempted from any Section.

### Section-A

**Mendelian principles:** Dominance, segregation, independent assortment, deviation from Mendelian inheritance. **Concept of gene:** Allele, multiple alleles, pseudoallele, complementation tests. **Extensions of Mendelian principles:** Codominance, incomplete dominance, gene. interactions, pleiotropy, genomic imprinting, penetrance and expressivity, phenocopy, linkage and crossing over, sex linkage, sex limited and sex influenced characters.

### Section-B

**Gene mapping methods:** Linkage maps, tetrad analysis, mapping with molecular markers, mapping by using somatic cell hybrids. **Extra chromosomal inheritance:** Inheritance of mitochondrial and chloroplast genes, maternal inheritance.

### Section-C

**Microbial genetics:** Methods of genetic transfers – transformation, conjugation, transduction and sex-duction, mapping genes by interrupted mating, fine structure analysis of genes. **Human genetics:** Pedigree analysis, lod score for linkage testing, karyotypes, genetic disorders. **Quantitative genetics:** Polygenic inheritance, heritability and its measurements, QTL mapping.

### Section-D

**Mutation:** Types, causes and detection, mutant types – lethal, conditional, biochemical, loss of function, gain of function, germinal verses somatic mutants, insertional mutagenesis. **Structural and numerical alterations of chromosomes:** Deletion, duplication, inversion, translocation, ploidy and their genetic implications. **Recombination:** Homologous and non-homologous recombination, including transposition, site-specific recombination.

### Books Recommended:

1. Benjmin P. Genetics (2013): A conceptual approach (5<sup>th</sup> edition), W. H. Freeman.
2. Gardner EJ., Simmons MJ. and Snustad P. (2011) Principles of Genetics. 8<sup>th</sup> Edition by publisher Wiley India Pvt. Limited.
3. Robert JB (2011) Genetics: Analysis and principle. 4<sup>th</sup> Edition, McGraw-Hill Higher Education

Course No MBL-590

#### Instructions for the Paper Setters:

Eight questions of equal marks (Specified in the syllabus) are to be set, two in each of the four Sections (A-D). Questions may be subdivided into parts (not exceeding four). Candidates are required to attempt five questions, selecting at least one question from each Section. The fifth question may be attempted from any Section.

#### Course Contents

##### Section-A

**Introduction:** Definition and scope of clinical biochemistry in diagnosis, use of clinical laboratory and interpretation of results. **Body Fluids:** Biochemistry of urine, blood and cerebrospinal fluid, normal and abnormal constituents and clinical entities in body fluids. **Water and Electrolyte:** Distribution of water in body, water turnover and balance, electrolyte composition of body fluids, regulation of electrolyte balance.

##### Section-B

**Acid Base Balance:** Production of acids and bases by the body, maintenance of body pH, disorders of acid base balance. **Disorders of carbohydrate metabolism:** Disorders of carbohydrate metabolism: Diabetes mellitus, ketoacidosis, hypoglycemia, glycogen storage diseases, galactosemia, lactose intolerance, and lactic acidosis. Disorders of lipids: lipid mal-absorption and steatorrhea, sphingolipidosis, clinical interrelationships of lipids, lipoproteins and apolipoproteins; Disorders of amino acid metabolism: inborn errors of amino acid metabolism-alkaptonuria, phenylketouria, albinism, gout, hyperglycemia, phenylalaninemia, homocystineuria, tyrosinemia, aminoacidurias; Disorders of nucleic acid metabolism (Purine and Pyrimidine metabolism); Disorders of iron, porphyrin and mineral metabolism; Metabolism under stress conditions.

##### Section-C

**Clinical Enzymology:** Principles of diagnostic enzymology, clinical significance of alkaline and acid phosphatase, SGOT, SGPT, LDH, CPK, aspartate aminotransferase, alanineaminotransferase, Creatine kinase. **Hormonal Disturbances:** Hormones their mode of action and functions. Clinical aspects of protein hormones, anterior pituitary hormones, posterior pituitary hormones, steroid hormones, adrenocortical steroids and thyroid hormones.

##### Section-D

**Detoxification:** Mechanism of detoxification: oxidation, reduction, hydrolysis and conjugation, clinical aspects of detoxification. **Organ Function Tests:** Renal function test, liver function test, gastric function test and thyroid functions test.

**Books Recommended**

1. Palmer T and Bonner PL (2007) Enzymes: Biochemistry, Biotechnology and Clinical Chemistry, 2<sup>nd</sup> Edition, Woodhead Publishing.
2. Vasudevan D, Sreeekumari S and Vaidyanathan K (2016) Textbook of Biochemistry for Medical Students. 8<sup>th</sup> Edition. Jaypee Brothers Medical Publishers (P) Ltd.

Candidates are required to attempt five questions, selecting at least one question from each Section. The fifth question may be attempted from any Section.

**Section-A**

Principles of classification of microbes; morphological, metabolic and molecular criteria for the classification, A brief introduction to major group of bacteria. Ultra structure of bacteria. Microbial Cultivation, Growth curve and factors influencing growth. Nutritional types requirements of bacteria. Disinfection and sterilization: Staining characteristics and techniques. Serological characteristics, Bacterial respiration, Microbial Diversity.

**Section-B**

Food Microbiology: Microbiology of dairy industry and beverage fermentation. Role of microorganisms in beverages tea and coffee fermentations. Vinegar Fermentation, microbiology of wine industry. Genetically modified foods. Biosensors in food.

**Section-C**

Antibiotics and their Mechanism of action, Molecular principles of drug targeting. Bacterial resistance to antibiotics. New vaccine technology, DNA vaccines, synthetic peptide vaccines, multivalent subunit vaccines, Vaccine clinical trials.

**Section-D**

Medical Microbiology: Diseases caused by Gram positive bacteria, Diseases caused by Gram negative bacteria, Disease caused by toxigenic bacteria, Diseases caused by Gram negative bacteria of family Enterobacteriaceae, sexually transmitted diseases, Overview of medical mycology, Overview of medical parasitology.

Candidates are required to attempt five questions, selecting at least one question from each Section. The fifth question may be attempted from any Section.

### Section-A

**Membrane structure and function:** Structure of model membrane, lipid bilayer and membrane protein diffusion, osmosis, ion channels, active transport, ion pumps, mechanism of sorting and regulation of intracellular transport, electrical properties of membranes.  
**Structural organization and function of intracellular organelles:** Cell wall, nucleus, mitochondria, Golgi bodies, lysosomes, endoplasmic reticulum, peroxisomes, plastids, vacuoles, chloroplast, structure & function of cytoskeleton and its role in motility.

### Section-B

**Cell signaling:** Hormones and their receptors, cell surface receptor, signaling through G-protein coupled receptors, signal transduction pathways, second messengers, regulation of signaling pathways, bacterial and plant two-component signaling systems, bacterial chemotaxis and quorum sensing.

### Section-C

**Cellular communication:** Regulation of hematopoiesis, general principles of cell communication, cell adhesion and roles of different adhesion molecules, gap junctions, extracellular matrix, integrins, neurotransmission and its regulation.

### Section-D

**Microscopic techniques:** Visualization of cells and subcellular components by light microscopy, resolving powers of different microscopes, microscopy of living cells, scanning and transmission microscopes, different fixation and staining techniques for EM, freeze-etch and freeze-fracture methods for EM, image processing methods in microscopy.

Candidates are required to attempt five questions, selecting at least one question from each Section. The fifth question may be attempted from any Section.

#### Section-A

##### Molecular Biology of Cell cycle:

**Cell division and cell cycle:** Mitosis and meiosis, their regulation, steps in cell cycle, and control of cell cycle. Regulation of Cell cycle progression: Maturation promoting factors (MPF), Cyclins and Cyclins dependent kinases, growth factors and growth inhibitory factors. Cell death and apoptosis.

#### Section-B

**Cancer:** Genetic rearrangements in progenitor cells, oncogenes, tumor suppressor genes, cancer and the cell cycle, virus-induced cancer, metastasis, interaction of cancer cells with normal cells, therapeutic interventions of uncontrolled cell growth.

#### Section-C

##### Control of Gene Expression at transcription and translation level in Prokaryotes:

Constitutive, Inducible and Repressible gene expression, Positive and Negative control of gene expression, Lac, Tryptophan, arabinose operons; Concept of attenuation, Lytic cascade and lysogenic repression in lambda bacteriophage.

#### Section-D

##### Control of Gene Expression at transcription and translation level in Eukaryotes:

Eukaryotic genome organization, Proteins involved in the control of transcription, Protein, protein interactions, Post-translational control, DNA methylation, Cell Signaling, Ligand binding to membrane receptors and its role in regulating transcription, phosphorylation cascade and amplification of signal. Role of chromatin in regulating gene expression and gene silencing.

**SECTION- A**

General Physiology: Cardiovascular system- anatomy of heart and blood vessels, Normal ECG, Cardiac cycle, cardiac output and blood pressure. Respiratory system-anatomy, mechanism of respiration, lung volume and capacities, external and Internal respiration, transport of O<sub>2</sub> and CO<sub>2</sub>, Muscular System: Anatomy of skeletal muscle, mechanism and energetics of contraction, muscle action potential, excitation-contraction coupling.

**SECTION-B**

Energy production in Sports and Exercise: Overview of energy production and metabolic regulation in high-intensity exercise, Definition of high-intensity exercise, Energy production during high-intensity exercise, Overview of energy production and metabolic regulation in endurance exercise.

**SECTION-C**

**Metabolic Regulation in Sport and Exercise:** How are catabolic and anabolic reactions controlled, Peptide hormones, neurotransmitters and regulation, Adrenaline activation of glycogenolysis, lipolysis, Insulin activation of glycogen synthase, Insulin inhibition of lipolysis, Insulin stimulation of protein synthesis, Steroid hormones and regulation.

**SECTION-D**

**Pharmacologic and Nutritional Substances to Enhance Performance or Produce Weight Loss:** Adaptogenic Herbs, Amino Acids, Anabolic Steroids, Caffeine, Ephedrine, Erythropoietin—Blood Doping, Levothyroxine, Metreleptin, Sibutramine, Vitamins and Minerals, World Anti-Doping Agency Testing Program
